**Acoustic Profiles** Randolph Jordan,2023 In *Acoustic Profiles* author Randolph Jordan proposes a new model for image sound analysis that incorporates the vocabulary and methods of environmental studies specifically exploring the potential of a model based on acoustic ecology Jordan uses close readings of films to connect the diverse fields of architecture environmental studies art history the history of modernity and media studies through the tenets of acoustic ecology In relating ways of thinking about sound from acoustic ecology to film studies and vice versa *Acoustic Profiles* takes an interdisciplinary approach to inspire readers to experience cinematic art as a motivator of greater environmental purposes and to understand the role of the media in achieving those purposes The book's method is referred to as acoustic profiling a theoretical tool for hearing how filmmakers articulate spatial dimensions in their works To that end the book demonstrates how the creative use of media technologies in different fields can be understood relationally through the ecological issues that connect them revivifying acoustic ecology for media studies while broadening the latter's ecological scope The book provides a tool kit for readers to hear films with new ears to think critically about this new listening practice and to extend that engagement beyond the walls of the screening room by opening works of audiovisual media up to the consideration of soundscape research

*Auditory Archaeology* Steve Mills,2016-06-16 This book offers a methodology for studying sound providing a flexible and widely applicable set of elements that can be adapted for use in a broad range of archaeological and heritage contexts

*Diminished Faculties* Jonathan Sterne,2021-10-25 In *Diminished Faculties* Jonathan Sterne offers a sweeping cultural study and theorization of impairment Drawing on his personal history with thyroid cancer and a paralyzed vocal cord Sterne undertakes a political phenomenology of impairment in which experience is understood from the standpoint of a subject that is not fully able to account for itself He conceives of impairment as a fundamental dimension of human experience examining it as both political and physical While some impairments are enshrined as normal in international standards others are treated as causes or effects of illness or disability Alongside his fractured account of experience Sterne provides a tour of alternative vocal technologies and practices a study of normal hearing loss as a cultural practice rather than a medical problem and an intertwined history and phenomenology of fatigue that follows the concept as it careens from people to materials science to industrial management to spoons Sterne demonstrates how impairment is a problem opportunity and occasion for approaching larger questions about disability subjectivity power technology and experience in new ways *Diminished Faculties* ends with a practical user's guide to impairment theory
