

## Solved Examples on Heat Transfer:-

### Question 1:-

An idealized representation of the air temperature as a function of distance from a single-pane window on a calm, winter day is shown in below figure. The window dimensions are 60 cm × 60 cm × 0.50 cm. (a) At what rate does heat flow out through the window? (Hint: The temperature drop across the glass is very small.) (b) Estimate the difference in temperature between the inner and outer glass surfaces.

### Concept:-

The rate  $H$  at which heat is transferred through the slab is,

- (a) directly proportional to the area ( $A$ ) available.
- (b) inversely proportional to the thickness of the slab  $\Delta x$ .
- (c) directly proportional to the temperature difference  $\Delta T$ .

$$\text{So, } H = kA \Delta T / \Delta x$$

Here,  $k$  is the proportionality constant and is called thermal conductivity of the material.

From the equation  $H = kA \Delta T / \Delta x$ , the temperature difference  $\Delta T$  will be,

$$\Delta T = H \Delta x / kA$$

The temperature gradient is defined as,

$$\text{Temperature gradient} = \Delta T / \Delta x$$

### Solution:-

(a) To find out the rate of heat flows out through the window, first we have to find out the temperature gradient both inside and outside the window.

Heat Transfer Tien-Mo Shih, 2016-12-31      **Heat Transfer** Tien-Mo Shih, 2012 Heat Transfer Lessons with Examples Solved by Matlab instructs students in heat transfer and cultivates independent and logical thinking ability The book focuses on fundamental concepts in heat transfer and can be used in courses in Heat Transfer Heat and Mass Transfer and Transport Processes It uses numerical examples and equation solving to clarify complex abstract concepts such as Kirchhoff's Law in Radiation Several features characterize this textbook It includes real world examples encountered in daily life Examples are mostly solved in simple Matlab codes readily for students to run numerical experiments by cutting and pasting Matlab codes into their PCs In parallel to Matlab codes some examples are solved at only a few nodes allowing students to understand the physics qualitatively without running Matlab codes It places emphasis on why for engineers not just how for technicians Heat Transfer is an ideal text for students of mechanical chemical and aerospace engineering It can also be used in programs for civil and electrical engineering and physics Rather than simply training students to be technicians Heat Transfer uses clear examples structured exercises and application activities that train students to be engineers The book encourages independent and logical thinking and gives students the skills needed to master complex technical subject matter

Introduction to Finite Element Analysis for Engineers Saad A. Ragab, Hassan E. Fayed, 2018-04-17 Finite Element Analysis for Engineers introduces FEA as a technique for solving differential equations and for application to problems in Civil Mechanical Aerospace and Biomedical Engineering and Engineering Science Mechanics Intended primarily for senior and first year graduate students the text is mathematically rigorous but in line with students math courses Organized around classes of differential equations the text includes MATLAB code for selected examples and problems Both solid mechanics and thermal fluid problems are considered Based on the first author's class tested notes the text builds a solid understanding of FEA concepts and modern engineering applications      Mathematical Modelling Courses for Engineering Education Yasar Ersoy, Alfredo O. Moscardini, 2013-06-29 As the role of the modern engineer is markedly different from that of even a decade ago the theme of engineering mathematics education EME is an important one The need for mathematical modelling MM courses and consideration of the educational impact of computer based technology environments merit special attention This book contains the proceeding of the NATO Advanced Research Workshop held on this theme in July 1993 We have left the industrial age behind and have entered the information age Computers and other emerging technologies are penetrating society in depth and gaining a strong influence in determining how in future society will be organised while the rapid change of information requires a more qualified work force This work force is vital to high technology and economic competitiveness in many industrialised countries throughout the world Within this framework the quality of EME has become an issue It is expected that the content of mathematics courses taught in schools of engineering today have to be re-evaluated continuously with regard to computer based technology and the needs of modern information society The main aim of the

workshop was to provide a forum for discussion between mathematicians engineering scientists mathematics educationalists and courseware developers in the higher education sector and to focus on the issues and problems of the design of more relevant and appropriate MM courses for engineering education
