Roots

Radicle comes out from the seed coat in the form of soft structure and it moves towards the soil. It develops and shapes primary root.

Primary root: It is formed as a direct elongation of the radicle in most dicotyledonous plants. It grows inside the soil. It bears lateral roots of several orders like secondary, tertiary, etc. roots.

Lateral roots: They extend horizontally from the primary root (radicle) and serve to anchor the plant securely into the soil. The lateral roots help in uptake of water and nutrients required for the growth and development of the plant.
