Entrepreneurship Policy Theory And Practice Reprint:

Entrepreneurship Policy: Theory and Practice Anders Lundstrom, Lois A. Stevenson, 2005-09-21 Entrepreneurship Policy Theory and Practice is the first book to fully analyze the construction of entrepreneurship policy a rapidly evolving area of policy about which little is known From a study and assessment of the practices of governments in thirteen countries in Europe North America and the Asia Pacific this book fully describes the policy area and shares new tools and methods for better understanding and explaining the why and how of an entrepreneurship policy approach Unlike other research in the field of entrepreneurship where implications from research findings are used to suggest what policy actions should be taken to increase the level of entrepreneurship in an economy this study is based on what entrepreneurship policy actions are being taken This is a unique book in the field which points to the way forward both for policymakers and for the research community in terms of thinking about entrepreneurship policy and the complex issues surrounding its development

Measuring Entrepreneurship Emilio Congregado, 2007-11-15 Entrepreneurship is playing an increasingly important role in the political agenda This phenomenon is due to the increasing importance of politics on the entrepreneurial promotion of growth and employment objectives This results in the need to satisfy the new demand for statistical information in two ways On the one hand quantitative information stock and flow analysis on the other hand qualitative information which tries to assess the ability to create wealth and employment and to innovate and export among others Consequently searching a systematic set of indicators that allows us to understand the basic entrepreneurship dimensions in order to diagnose forecast and monitor entrepreneurial networks is crucial for both the research agenda and the political action agenda However the lack of this kind of statistical information is clear if we review some statistical subsystems on entrepreneurship on a comparison basis The few essays on the subject are still in an initial stage The reference theoretical framework to set the key dimensions to be analysed is to be established yet The search for indicators and even the articulation of specific statistics have become crucial in order to make progress in the applied research and to design implement and assess the different measurements of public intervention on this subject Thus the development of a set of indicators that allow us to satisfactorily capture the different dimensions of the entrepreneurial network for a specific sector or territory becomes a basic element to assist progress in entrepreneurship knowledge

Entrepreneurship, Innovation and Regional Development Jay Mitra, 2013-03 Entrepreneurship Innovation and Regional Development is unique in that it addresses the central factors in economic development entrepreneurship innovation and organizational learning as regional phenomena This definitive text focuses on different types of organizations to illustrate the value of entrepreneurship and innovation both for businesses and for regional development Establishing a firm link between entrepreneurship innovation and economic regeneration the book also examines the factors contributing to their success Replete with international case studies empirical evidence of concepts and practical examples this is an ideal text to support postgraduate teaching and research related to entrepreneurship

innovation management and regional economic development

Transitions of Energy Regimes Holger Berg, 2013

Transitions of energy regimes are phenomena that have profoundly affected economies and civilisations over the last 600 years. The shifts from wood to coal from coal to oil and the potential change to another resource that might be pending now have influenced the ways in which we work produce and live. Though they are fundamentally influenced and steered by economic forces these changes have seen little analysis from the viewpoint of economic theory. This book seeks to contribute to filling this gap. To this avail it firstly provides insight into the historical and present transitions that have taken place. It then gives an overview of the existing economic approaches to energy regime transitions and develops a new interpretation based on evolutionary economics. For this an approach based on complexity theory and complex adaptive systems is created and applied and the mechanisms behind regime changes are interpreted according to this framework. The analysis is supported by further research into certain aspects of transitions. Historical and present research on resource depletion is compared the working of path dependence in the constitution and decline of the oil regime is analysed and the role of entrepreneurship in a regime change from the oil regime towards a potential renewable energy regime is investigated. The book closes with an appraisal of energy regime transitions as a future field of research for evolutionary economics.
