Problem Solving in Enzyme Biocatalysis Andrés Illanes, Lorena Wilson, Carlos Vera, 2013-10-02 Enzyme biocatalysis is a fast growing area in process biotechnology that has expanded from the traditional fields of foods detergents and leather applications to more sophisticated uses in the pharmaceutical and fine chemicals sectors and environmental management Conventional applications of industrial enzymes are expected to grow with major opportunities in the detergent and animal feed sectors and new uses in biofuel production and human and animal therapy In order to design more efficient enzyme reactors and evaluate performance properly sound mathematical expressions must be developed which consider enzyme kinetics material balances and eventual mass transfer limitations With a focus on problem solving each chapter provides abridged coverage of the subject followed by a number of solved problems illustrating resolution procedures and the main concepts underlying them plus supplementary questions and answers Based on more than 50 years of teaching experience Problem Solving in Enzyme Biocatalysis is a unique reference for students of chemical and biochemical engineering as well as biochemists and chemists dealing with bioprocesses Contains Enzyme properties and applications enzyme kinetics enzyme reactor design and operation 146 worked problems and solutions in enzyme biocatalysis Problems and Problem Solving in Chemistry Education Georgios Tsaparlis, 2021-05-17 Problem solving is central to the teaching and learning of chemistry at secondary tertiary and post tertiary levels of education opening to students and professional chemists alike a whole new world for analysing data looking for patterns and making deductions As an important higher order thinking skill problem solving also constitutes a major research field in science education Relevant education research is an ongoing process with recent developments occurring not only in the area of quantitative computational problems but also in qualitative problem solving The following situations are considered some general others with a focus on specific areas of chemistry quantitative problems qualitative reasoning metacognition and resource activation deconstructing the problem solving process an overview of the working memory hypothesis reasoning with the electron pushing formalism scaffolding organic synthesis skills spectroscopy for structural characterization in organic chemistry enzyme kinetics problem solving in the academic chemistry laboratory chemistry problem solving in context team based active learning technology for molecular representations IR spectra simulation and computational quantum chemistry tools The book concludes with methodological and epistemological issues in problem solving research and other perspectives in problem solving in chemistry With a foreword by George Bodner **Introduction to Chemical Kinetics** Margaret Robson Wright, 2005-08-19 The range of courses requiring a good basic understanding of chemical kinetics is extensive ranging from chemical engineers and pharmacists to biochemists and providing the fundamentals in chemistry Due to the wide reaching nature of the subject readers often struggle to find a book which provides in depth comprehensive information without focusing on one specific subject too heavily Here Dr Margaret Wright provides an essential introduction to the subject guiding the reader through the

basics but then going on to provide a reference which professionals will continue to dip in to through their careers Through extensive worked examples Dr Wright presents the theories as to why and how reactions occur before examining the physical and chemical requirements for a reaction and the factors which can influence these Carefully structured each chapter includes learning objectives summary sections and problems Includes numerous applications to show relevance of kinetics and also provides plenty of worked examples integrated throughout the text

Fundamentals of Enzyme Kinetics Athel Cornish-Bowden, 2014-05-20 *Fundamentals of Enzyme Kinetics* details the rate of reactions catalyzed by different enzymes and the effects of varying the conditions on them The book includes the basic principles of chemical kinetics especially the order of a reaction and its rate constraints The text also gives an introduction to enzyme kinetics the idea of an enzyme substrate complex the Michaelis Menten equation the steady state treatment and the validity of its assumption Practical considerations the derivation of steady state rate equations inhibitors and activators and two substrate reactions are also explained Problems after the end of each chapter have also been added as well as their solutions at the end of the book to test the readers learning The text is highly recommended for undergraduate students in biochemistry who wish to study about enzymes or focus completely on enzymology as most of the mathematics used in this book which have been explained in detail to remove most barriers of understanding is elementary
