The book is designed to be used both as a collection of readings and as an introductory research methods book in its own right. Topics covered include research methodology, research design, data collection and preparation, analyzing data, mixing qualitative and quantitative methods, validity and reliability, methodological critique, postmodernism, post-structuralism, and critical ethnography, political and ethical aspects of research, philosophy of social science, reporting research. Mixed Methodology in Psychological Research, 2007-01-01 Mixed Methodology is a new star in the social science sky. More and more researchers are discontent with mono-method concepts for their research projects. They are trying new ways in combining or integrating different methods and methodological approaches. There are two debates in this field: the qualitative-quantitative controversy and the one-method-multi-method discourse. This book discusses those controversies and tries to give some reasons and examples for overcoming mono-method research in psychology. We think the discussion of methodological topics should not be divided from specific research projects. Only in the context of a concrete research question it makes sense to consider adequate research methods. So the volume presents examples of mixed methodologies from different fields in psychology and education: from psychiatry to organisational psychology, from learning studies to media analysis. The studies are grouped into four sections: combining qualitative methods, combining qualitative and quantitative methods, access to individual experience by mixed methods, and deeper understanding of findings by mixing methods. The book is addressed to all students, researchers, and methodologically interested people in social sciences and especially in psychology.
