Hydroponic Garden Secrets Tyler Water,2020-12-04 COLOR EDITION Do you want to discover a scientific technique for building your own hydroponic garden Then keep reading Hydroponics is a means of growing plants without soil It makes use of nutrient rich water or a nutrient solution as well as techniques that allow the plant to grow You can also use sand or gravel with added nutrients In this chapter you are going to learn the history of the growing art that we call hydroponics You will also learn about some of its practical uses throughout history Traditionally the soil is used to grow plants It was thought that soil was necessary since plants started out in the earth with nutrient rich soils like the strawberry plants that were first grown in the wild before being cultivated for gardens At some point in history it was discovered that the soil was not necessary for the growing process Rather the role of soil is to act as a reservoir to hold the nutrients that a plant needs in order to grow Crops grown hydroponically according to studies grow faster and healthier and are better than crops

grown on soil this is because they would not have to go through a lot of disadvantages that the soil may present such as situations of a break out of a soil borne disease in the area the struggle to have to push its way through the soil during germination the attack from organism and pests that live in the soil And of course the plants in hydroponic systems do not have to hustle for nutrients and water because this is basically what they are planted in in hydroponic systems water based mineral nutrient solutions Hydroponics also helps you save water which sounds a bit strange when you think of water is essential for this process Usually it s every alternate day so that the soil soaks up the water and is transported to the roots That sounds fine doesn t it But that s only a portion of the big picture Some of the water is bound to seep out of the container some of it evaporates and a portion of it seeps further into the soil beyond the plant s roots So in practice the plant essentially only uses up a small portion of the water Hydroponics uses a simple recirculating mechanism that ensures that the water is fully soaked up by the roots It means that the portion of water that isn t absorbed by the plant is directly sent to the reservoir The same water from the reservoir is later pumped up to the plants Since the reservoir is shut tight there is no chance for the water to evaporate and it certainly will not seep out of the bottom of the container You can save around 80% of the water by switching to hydroponics instead of using regular soil gardening This book covers the following topics Equipment Hydroponic Growing System Plant necessities Best plant for hydroponics Pest and disease Choosing the right site for your garden Maintenance of your hydroponic garden And Much More Do not get scared hydroponic gardening is not as complicated tricky and demanding as your mind is about to convince you that it is on the contrary it is very simple And this is what this book is about to enlighten you and get you started on having your own hydroponic garden Ready to get started Click Buy Now

Hydroponics Mastery Bible Thomas Green,2020-10-28 Learn the Secrets of Hydroponics and Boost your Gardening Skills Do you want to grow your own food but lack the space outside Are you looking for a new challenge where the goal is to provide healthy food for your family Do you want to create your very own soil free garden If you answered Yes to any of those questions this book is for you so keep reading Among modern methods of growing crops Hydroponics occupies a special place because of the many benefits it offers It is nothing more than means the cultivation of plants without soil but in water And the water is enriched with nutrients The history of the emergence of hydroponics is associated with centuries of research by scientists as a result of which a huge number of experiments were

carried out that made it possible to determine the optimal balanced nutritional composition to ensure the vital activity of plants. As it turned out, the soil environment for crops is not necessary; plants successfully grow and develop if their root system is in contact with an aqueous medium containing all the necessary substances. This fact became fundamental for the development of hydroponics as a new method of crop production. Through hydroponics, you no longer have to worry about removing weeds and fighting pests in the soil. Plants that grow in a hydroponic system are healthier and grow faster. Another advantage is that through specific extensions, a hydroponic system can also be supplied semi-automatically or fully automatically. Therefore, it is particularly suitable for those who do not have a large garden, guaranteeing perfect results. Hydroponics is important as its further development and improvement, which will help solve the global problems of humankind, including the most significant among them: providing food to an ever-growing number of people on our planet. All these factors confirm the need to search for new, more effective methods of growing crops, one of which is hydroponics.

Hydroponics Mastery includes 6 books: Hydroponics for Absolute Beginners, Hydroponic Garden, Hydroponics Hydroponic System, Hydroponic System for Business, Hydroponics and Aquaponics.
