

The background of the slide is a scenic landscape. In the foreground, a calm lake reflects the sky and the surrounding scenery. The middle ground is dominated by a dense line of trees with vibrant autumn foliage in shades of red, orange, and yellow. Behind the trees, a range of rugged mountains is visible, with the highest peaks covered in snow. The sky is a clear, bright blue, and the sun is visible in the upper left quadrant, creating a soft glow. The overall atmosphere is peaceful and beautiful.

Discrete Communication Systems Stevan Berber, 2021-07-19 This is the first textbook which presents the theory of pure discrete communication systems and its relation to the existing theory of digital and analog communications at a graduate level Based on the orthogonality principles and theory of discrete time stochastic processes a generic structure of communication systems based on correlation demodulation and optimum detection is developed and presented in the form of mathematical operators with precisely defined inputs and outputs and related functions Based on this generic structure the traditionally defined phase shift keying PSK frequency shift keying FSK quadrature amplitude modulation QAM orthogonal frequency division multiplexing OFDM and code division multiple access CDMA systems are deduced as its special cases The main chapters presenting the theory of communications are supported by a set of supplementary chapters containing the theory of deterministic and stochastic signal processing which makes the book a self contained presentation of the subject The book uses unified notation and unified terminology which allows a clear distinction between deterministic and stochastic signals power signals and energy signals discrete time signals and processes and continuous time signals and processes and an easy way of understanding the differences in defining the correlation functions power and energy spectral densities and amplitudes and power spectra of the mentioned signals and processes In addition to solved examples in the text about 300 solved problems are available to readers in the supplementary material that aim to enhance the understanding of the theory in the text In addition five research Projects are added to be used by lecturers or instructors that aim to enhance the understanding of theory and to establish its relation to the practice
