Comparing MFCC and Pitch-Based Features in CNN Speech Emotion Recognition for Multilingual Speech Processing Natalie Abramov, 2025 Speech Emotion Recognition SER is a growing field in Affective Computing that is characterized by artificial intelligence systems automatically classifying emotions in speech This thesis investigates the effectiveness of different feature extraction methods for SER across tonal and non tonal languages While Mel Frequency Cepstral Coefficients MFCCs are widely used for capturing spectral features in speech they inherently discard some pitch information that can be essential in classifying emotions in tonal languages such as Mandarin Chinese To address this a custom pitch based feature extraction layer PitchExtractor was developed using the Short Time Fourier Transform STFT and magnitude spectrogram to extract dominant pitch features from audio waveforms This research evaluates the SER performance of PitchExtractor alone MFCCs alone and a combined model incorporating both layers Experiments were conducted across three datasets ESD Chinese IEMOCAP English and EMO DB German to evaluate performance across tonal and non tonal contexts Results show that while MFCCs alone outperform pitch features across all datasets combining MFCCs with explicit pitch information led to marginal improvements for the tonal dataset ESD However the same combined model decreased performance for the non tonal datasets which suggests that pitch features provide valuable emotional nuances in tonal speech but introduce noise in non tonal speech These findings emphasize the importance of language specific feature selection in speech emotion recognition and create a foundation for more versatile multilingual SER models [Automatic Speech Recognition and Understanding](#) ,2003
