**The Saturn V F-1 Engine** Anthony Young,2008-11-25 The launch of Sputnik in 1957 not only began the space age it also showed that Soviet rockets were more powerful than American ones Within months the US Air Force hired Rocketdyne for a feasibility study of an engine capable of delivering at least 1 million pounds of thrust Later NASA ran the development of this F 1 engine in order to use it to power the first stage of the Saturn V rocket that would send Apollo missions to the Moon It is no exaggeration to say that without the F 1 engine NASA would not have been able to achieve President Kennedy's 1961 challenge to his nation to land a man on the Moon before the decade was out *The Saturn V F-1 Engine* Anthony Young,2019-02-19 When the mighty Rocketdyne F 1 engine was conceived in the late 1950s for the U S Air Force it had no defined mission and there was no launch vehicle it could power It was a bold concept to push the technological envelope of rocket propulsion in order to put massive payloads into Earth orbit Few realized at the time that the F 1 would one day propel American astronauts to the Moon In *The Saturn V F 1 Engine* Anthony Young tells the amazing story of unbridled vision bold engineering explosive failures during testing unrelenting persistence to find solutions and ultimate success in launching the Saturn V with a 100 percent success rate The book contains personal interviews with many Rocketdyne and NASA personnel involved in the engine's design development testing and production is lavishly illustrated with black and white and color photographs many never previously published is the first complete history of the most powerful rocket engine ever built The F 1 engine remains the high point in U S liquid rocket propulsion it represents a period in American history when nothing was impossible 1968 NASA Authorization United States. Congress. House. Committee on Science and Astronautics,United States. Congress. House. Committee on Science and Astronautics. Subcommittee on Manned Space Flight,United States. Congress. House. Committee on Science and Astronautics. Subcommittee on Space Science and Applications,United States. Congress. House. Committee on Science and Astronautics. Subcommittee on Advanced Research and Technology,1967 Committee Serial No 2 Considers H R 4450 and H R 6470 superseded by H R 10340 to provide FY68 authorizations for NASA RPD programs including the Apollo Program for construction of facilities at field centers and for administrative operations **Milestones of Space** Michael J. Neufeld,2014-05-15 A history of exploration through eleven objects from the Air and Space Museum Takes you behind the scenes with firsthand stories and rare photos William F Readdy former NASA astronaut and Space Shuttle commander Throughout human history across cultures and landscapes countless individuals have gazed with wonder in the same direction upward Getting to space was no easy task and our quest to further explore the universe to understand the impossibly vast heavens continues In *Milestones of Space* Michael Neufeld and select curators of the Smithsonian National Air and Space Museum present a gorgeous photographic celebration of some of the most groundbreaking artifacts that played key parts in giving humanity its first steps into the cosmos Focusing on the most iconic objects and technology such as Friendship 7 the Lunar Module 2 Neil Armstrong's Lunar Suit the Hubble Space

Telescope and Space Shuttle Discovery this book extensively profiles eleven of the NASM's most important breakthroughs in space technology. The NASM curators feature each object in incredible detail with compelling timelines, sidebars, and captions and over 150 archival images that provide new and little-known insights into their development and historical context. We are still a long way from grasping our universe, but for now, *Milestones of Space* magnificently commemorates the individuals and inventions that have taken us this far.

**NASA 50th Anniversary Proceedings: NASA's First 50 Years: Historical Perspectives** Steven J. Dick, National Aeronautics and Space Administration, 2010-07-07. On 29 July 1958, President Dwight D. Eisenhower signed the National Aeronautics and Space Act, creating the National Aeronautics and Space Administration (NASA), which became operational on 1 October of that year. Over the next 50 years, NASA achieved a set of spectacular feats ranging from advancing the well-established field of aeronautics to pioneering the new fields of Earth and space science and human spaceflight. In the midst of the geopolitical context of the Cold War, 12 Americans walked on the Moon, arriving in peace for all mankind. Humans saw their home planet from a new perspective with unforgettable Apollo images of Earthrise and the Blue Marble, as well as the pale blue dot from the edge of the solar system. A flotilla of spacecraft has studied Earth, while other spacecraft have probed the depths of the solar system and the universe beyond. In the 1980s, the evolution of aeronautics gave us the first winged human spacecraft, the Space Shuttle, and the International Space Station stands as a symbol of human cooperation in space, as well as a possible way station to the stars. With the Apollo fire and two Space Shuttle accidents, NASA has also seen the depths of tragedy. In this volume, a wide array of scholars turn a critical eye toward NASA's first 50 years, probing an institution widely seen as the premier agency for exploration in the world, carrying on a long tradition of exploration by the United States and the human species in general. Fifty years after its founding, NASA finds itself at a crossroads that historical perspectives can only help to illuminate.

*Limited Scientific and Technical Aerospace Reports*, 1972. **Congressional Record** United States. Congress, 1960. *NASA SP.*, 1962. *Doing the Impossible* Arthur L. Slotkin, 2012-07-26. Apollo was known for its engineering triumphs, but its success also came from a disciplined management style. This excellent account of one of the most important personalities in early American human spaceflight history describes for the first time how George E. Mueller, the system manager of the human spaceflight program of the 1960s, applied the SPO methodology and other special considerations, such as all-up testing, resulting in the success of the Apollo Program. Wernher von Braun and others did not readily accept such testing, or Mueller's approach to system management, but later acknowledged that without them, NASA would not have landed astronauts on the Moon by 1969. While Apollo remained Mueller's priority from his earliest days at the agency, he promoted a robust post-Apollo Program, which resulted in Skylab, the Space Shuttle, and the International Space Station. As a result of these efforts, Mueller earned the sobriquet "the father of the space shuttle." Following his success at NASA, Mueller returned to industry. Although he did not play a leading role in human spaceflight again, in 2011 the National Air and Space Museum awarded him their lifetime achievement trophy for his

contributions Following the contributions of George E Mueller in this unique book Arthur L Slotkin answers such questions as exactly how did the methods developed for use in the Air Force ballistic missile programs get modified and used in the Apollo Program How did George E Mueller with the help of others manage the Apollo Program How did NASA centers coming from federal agencies with cultures of their own adapt to the new structured approach imposed from Washington George E Mueller is the ideal central character for this book He was instrumental in the creation of Apollo extension systems leading to Apollo the Shuttle and today s ISS and thus was a pivotal figure in early American human spaceflight history
