Advances in Subsea Pipeline Engineering and Technology C.P. Ellinas,1990-05-31 Dr C P Ellinas Advanced Mechanics flexible pipelines pipeline design fabrication and installation deepwater applications Advances in North Sea technology over the last few years have been concerned mostly with marginal fields small diameter pipelines and new materials which are well covered in the first three topics Economic development of marginal fields requires processing of oil and gas to take place not at the wellhead but at existing facilities usually some distance away Hydrocarbons are thus often transported at high pressure and temperature in small diameter pipelines which need to be protected through trenching However such operational practice has brought to the fore a problem that in the past was of little concern namely upheaval buckling

Nearshore Sediment Dynamics, Beaufort Sea Donald Ormond Hodgins,Environmental Studies Revolving Funds (Canada),1986 A detailed set of wave current suspended sediment and pore water pressure measurements was made from August 18 to September 24 1986 at 2 locations offshore of North Head on Richards Island Because pack ice remained between 100 and 200 km offshore 1986 was an excellent year for program and two storms with wave heights up to 2.5 m were monitored in shallow water The objective was to measure changes in pore water pressure and near bed suspended sediment concentrations in response to storm generated waves and near bottom currents Ultimately data are to be used to examine liquefaction potential of surficial soils expected sediment transport rates and mechanics of wave energy attenuation
