BEHAVIOURAL FINANCE SULTAN, M. M., 2014-09-01 This comprehensive lucidly written text is an ideal introduction to behavioural finance. The book caters to the needs of both undergraduate and postgraduate management courses. It covers almost all important topics of behavioural finance prescribed in the syllabi of various universities across India including Neurofinance and Forensic Accounting which have rare occurrence in other books but are important from a future perspective. There is a dearth of literature in behavioural finance and if available, then the books are of large volumes written by foreign authors citing examples and case studies from the countries other than India. Hence, the present book aims at providing information in a global scenario, particularly Indian cases. A number of case studies and box items make this text interesting and informative. Review questions given at the end of each chapter help students in assessing their knowledge after having learned the concepts. Overall, the book will help readers in gaining adequate knowledge of the subject.

Behavioral Finance Hersh Shefrin, 2001 *The Effect of Founder-CEO Overconfidence on Merger Premium* Christoph Meyer, 2015-05-08 Master s Thesis from the year 2014 in the subject Business economics Investment and Finance grade 1 0 Heriot Watt University Edinburgh Finance course Corporate Finance language English abstract Theoretical and empirical research has indicated that overconfidence affects merger decision making and merger premium However founder CEOs have not been subject of such a study yet This lack is particular surprising when considering the differences between founder and manager CEOs as well as the media attention of founder CEOs The present dissertation aims to fill the research gap through investigating the effect of founder CEO overconfidence on merger premium in the high tech industry Moreover this dissertation aims to extend the literature by including target CEO overconfidence and studying the impact on merger premium when both acquirer and target CEO are overconfident By studying founder CEOs this dissertation also aims to establish the effectiveness of founders as CEOs The resource based perspective argues that while founders help in the early years of the company they become less

effective as the firm evolves since they lack the necessary management skills Design methodology approach Using ordinary least square OLS technique this study investigates the effects of implemented factors in determining the merger premium paid in high tech acquisitions A sample consisting of 245 acquisitions in the high tech industry of 124 CEOs during a 19 year period 1995 to 2013 has been observed In order to test the founder CEO effects this dissertation develops a matched sample approach of 62 founder CEOs and 62 manager CEOs This study shows a strong relationship between CEO overconfidence and acquisitions premium paid The results suggest that the CEO overconfidence may provide an explanation for the well rehearsed overpayment problem An additional analysis indicates that the highest premium is paid when combined acquiring and target firm CEO overconfidence exist The dissertation also shows that founder CEOs pay higher premia than manager CEOs in the high tech industry It has been proven that founder CEOs decisions are more independent from interventions of the board of directors and that founder CEO overpayment is not dependent on the company's size or relatedness of mergers The findings are reliable as the results remain constant for applied robustness tests

Beyond Greed and Fear Hersh Shefrin, 2002 Even the best Wall Street investors make mistakes No matter how savvy or experienced all financial practitioners eventually let bias overconfidence and emotion cloud their judgement and misguide their actions Yet most financial decision making models fail to factor in these fundamentals of human nature In *Beyond Greed and Fear* the most authoritative guide to what really influences the decision making process Hersh Shefrin uses the latest psychological research to help us understand the human behavior that guides stock selection financial services and corporate financial strategy Shefrin argues that financial practitioners must acknowledge and understand behavioral finance the application of psychology to financial behavior in order to avoid many of the investment pitfalls caused by human error Through colorful often humorous real world examples Shefrin points out the common but costly mistakes that money managers security analysts financial planners investment bankers and corporate leaders make so that readers gain valuable insights into their own financial decisions and those of their employees asset managers and advisors According to Shefrin the financial community ignores the psychology of investing at its own peril *Beyond Greed and Fear* illuminates behavioral finance for today's investor It will help practitioners to recognize and avoid bias and errors in their decisions and to modify and improve their overall investment strategies

Behavioural Investing James Montier, 2009-10-09 Behavioural investing seeks to bridge the gap between psychology and investing All too many investors are unaware of the mental pitfalls that await them Even once we are aware of our biases we must recognise that knowledge does not equal behaviour The solution lies in designing and adopting an investment process that is at least partially robust to behavioural decision making errors

Behavioural Investing A Practitioner's Guide to Applying Behavioural Finance explores the biases we face the way in which they show up in the investment process and urges readers to adopt an empirically based sceptical approach to investing This book is unique in combining insights from the field of applied psychology with a thorough understanding of the investment

problem The content is practitioner focused throughout and will be essential reading for any investment professional looking to improve their investing behaviour to maximise returns Key features include The only book to cover the applications of behavioural finance An executive summary for every chapter with key points highlighted at the chapter start Information on the key behavioural biases of professional investors including The seven sins of fund management Investment myth busting and The Tao of investing Practical examples showing how using a psychologically inspired model can improve on standard common practice valuation tools Written by an internationally renowned expert in the field of behavioural finance

Behavioural Investing Pauline Yong, 2013-07-16 What drives investor behaviour We would all like to think we always behave rationally but in reality we are often swayed by emotions Most financial theories are based on the idea that everyone takes careful account of all available information before making investment decisions However researchers have uncovered a surprisingly large amount of evidence that this is not the case Dozens of examples of irrational behaviour and repeated errors in judgement have been documented in academic studies This book gives plenty of examples of investment mistakes and analyses them from a Behavioural Finance perspective Behavioural Finance is the study of the influence of psychology on the behaviour of investors and their subsequent effect on the markets It combines the discipline of psychology and economics to explain why and how people make irrational or illogical decisions when they make investment decisions
