doing any internal work Fluids are divided into liquids and gases the former are incompressible and inelastic the latter are compressible elastic tend to expand indefinitely and therefore vary in density No known fluid is perfect but all offer some resistance to change of shape An imperfect fluid however yields to the slightest effort made to separate its particles from each other if that effort be continued long enough The mechanics of fluids is divided into Hydrostatics Hydrodynamics Aerostatics and Aerodynamics The general term hydraulics may be held to include them all though generally limited to the first two Variation in density of gases Let v be the volume w the weight p the pressure and t the temperature of a given quantity of a gas About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
