*The Edinburgh Review* ,1891      **Time's Arrow and Archimedes' Point** Huw Price, 1997-12-04 Why is the future so different from the past Why does the past affect the future and not the other way around What does quantum mechanics really tell us about the world In this important and accessible book Huw Price throws fascinating new light these great mysteries of modern physics and connects them in a wholly original way Price begins with the mystery of the arrow of time Price shows that for over a century most physicists have thought about problems of time in the wrong way Misled by the human perspective from within time which distorts and exaggerates the differences between past and future they have fallen victim to what Price calls the double standard fallacy proposed explanations of the difference between the past and the future turn out to rely on a difference which has been slipped in at the beginning when the physicists themselves treat the past and future in different ways To avoid this fallacy Price argues we need to overcome our natural tendency to think about the past and the future differently We need to imagine a point outside time an Archimedean view from nowhen from which to observe time in an unbiased way *Time's Arrow and Archimedes Point* presents an innovative and controversial view of time and contemporary physics In this exciting book Price urges physicists philosophers and anyone who has ever pondered the mysteries of time to look at the world from the fresh perspective of Archimedes Point and gain a deeper understanding of
