Transdisciplinary Engineering: Crossing Boundaries Milton Borsato, Nel Wognum, Margherita Peruzzini, Josip Stjepandic, Wim J.C. Verhagen, 2016-10-15. The Concurrent Engineering (CE) approach was developed in the 1980s based on the concept that different phases of a product life cycle should be conducted concurrently and initiated as early as possible within the Product Creation Process (PCP). CE concepts have matured and become the foundation of many new ideas, methodologies, initiatives, approaches and tools. This book contains the proceedings from the 23rd ISPE Inc International Conference on Transdisciplinary Engineering formerly Concurrent Engineering held in Curitiba, Parana, Brazil in October 2016. The conference entitled *Transdisciplinary Engineering: Crossing Boundaries* provides an important forum for international scientific exchange on Concurrent Engineering and collaborative enterprises and attracts the participation of researchers, industry experts and students as well as government representatives. The 108 peer reviewed papers and keynote speech included here range from theoretical and conceptual to strongly pragmatic works which are organized into 17 sections including Concurrent Engineering and knowledge exchange, engineering for sustainability, multidisciplinary project management, collaborative

design and engineering optimization of engineering operations and data analytics and multidisciplinary design optimization among others The book gives an overview of the latest research advancements and applications in the field and will be of interest to researchers design practitioners and educators
