## Chapter One:

- Anatomy- the study of the structure of the human body and its parts
  - Physiology- the study of the function of the human body and its parts
    - Structure/Function = Anatomy/Physiology
    - The structure of organs and parts determine the function
    - If a structure changes, its function might also; directly dependent
- EX: Hemoglobin molecules
- Structure = flat, concave, circular
    - This allows for oxygen to be close to the surface of a cell, so it can pass through the blood stream in and away from the heart
  - Function = to carry oxygen
    - Function is to carry oxygen so the flat/circular structure makes sense
- \*If the structure is mutated, sickle-cell anemia results\***
- function is directly affected b/c of a change in structure
- Levels of Structural Organization
    - Subatomic Particles: protons, neutrons, electrons that make up cells
    - Atom: tiny particles that make up chemicals EX: hydrogen, carbon
    - Molecule: particles consisting of atoms EX: water, glucose
    - Macromolecule: large particles consisting of molecules EX: DNA, protein
    - Organelle: functional part of a cell EX: mitochondria, lysosome
    - Cell: basic unit of structure and function EX: muscle, nerve, or blood cell
    - Tissue: layer or mass of cells with specific function EX: adipose tissue
    - Organ: group of different tissues with a function EX: heart, kidney, liver
    - Organ System: group of organs w/ common function EX: digestive system
    - Organism: composed of organ systems interacting EX: human
- \*To know what is going on w/ the body as a whole, you must know how each part is functioning and interacting!\***
- Organ Systems
    - Integumentary: protection, thermoregulation, sensory reception, vitamin D production
    - Skeletal: framework, protection, attachment site, storage of inorganic salts, support and movement, produce blood cells (bone marrow)
    - Muscular: movement, body heat, maintain posture
    - Nervous: control center, detects changes in body and reacts if needed using nerve impulses
    - Endocrine: integration and coordination of organ function through hormone impulses

thinking We have selected a set of sample problems from the Society of Actuaries SOA that we believe represent the core concepts of probability theory

**The Structure of the Book** This book is divided into two parts The first part covers the fundamental concepts of probability theory including the basic rules of probability random variables distributions and expected values The second part contains a set of high quality sample problems that cover a range of topics in probability theory Each problem is fully explained and solved in detail so you can follow the logic and understand the reasoning behind the solution This book is not designed to help you achieve a perfect score on Exam P Instead our goal is to help you develop a deep understanding of probability theory that will serve you well throughout your career as an actuary If you study the material in this book carefully and work through the sample problems you should have no problem achieving a passable score on Exam P and laying a strong foundation for future exams
