

# The Half-life of Pennies Lab

(Complete your pennies in approximately 15 minutes)

Imagine living in a town that is 1000 years old and still having more than 1,000 people! That is nearly what the world's oldest copper pennies do. Over 1,000 years, 50% of the original pennies minted in the American colony remained that same color when Lincoln found America. Every 5,000 years, half of the pennies left in a forest experience damage or corrosion. Eventually a more useful material, in this hypothetical case will end their journey and allow the world to get on things!

**Materials:** 100 pennies in large container with lid

**Procedure:**

1. Count **100 pennies** before 1:00 using a digital scale.
2. Divide pennies into 10 equal sized bins. The "total" size of the container/pennies.

Place the number of pennies in each bin in the number of pennies remaining recorded in the descriptive table. Repeat this process with the number of pennies in each bin. Enter the systems ending up in the final count table.

**Count Table:**

Bin Number	Number of Pennies remaining	Number of Pennies remaining
1	50	50
2	50	50
3	50	50
4	50	50
5	5	5
6	5	5
7	5	5
8	5	5

1. Repeat this process until you have 10 bins. Record the number of pennies in each bin, the total number of pennies remaining.

2. Repeat the process to get your data. Label the columns "Number of Pennies," "Number of Pennies remaining," "Total number of pennies remaining." Using your data table, plotting number of pennies remaining in each bin.
