[Biermann's Handbook of Pulp and Paper](#) Pratima Bajpai, 2018-05-17 Biermann's Handbook of Pulp and Paper Paper and Board Making Third Edition provides a thorough introduction to paper and board making providing paper technologists recent information The book emphasizes principles and concepts behind papermaking detailing both the physical and chemical processes It has been updated revised and extended Several new chapters have been added

Papermaking chemistry has found an adequate scope covering this important area by basics and practical application. Scientific and technical advances in refining including the latest developments have been presented. The process of stock preparation describes the unit processes. An exhaustive overview of Chemical additives in Pulp and Paper Industry is included. Paper and pulp processing and additive chemicals are an integral part of the total papermaking process from pulp slurry through sheet formation to effluent disposal. Water circuits with loop designs and circuit closure are presented. The chapter on paper and board manufacture covers the different sections in the paper machine and also fabrics rolls and roll covers and describes the different types of machines producing the various paper and board grades. Coating is dealt with in a separate chapter covering color formulation and preparation and also coating application. Paper finishing gives an insight into what happens at roll slitting and handling. The chapter on environmental impact includes waste water treatment and handling, air emissions utilization and solid residue generation and mitigation. The major paper and board grades and their properties are described. Biotechnological methods for paper processing are also presented. This handbook is essential reading for Applied Chemists, Foresters, Chemical Engineers, Wood Scientists and Pulp and Paper technologists, Engineers and anyone else interested or involved in the pulp and paper industry. Provides comprehensive coverage on all aspects of papermaking. Covers the latest science and technology in papermaking. Includes traditional and biotechnological methods, a unique feature of this book. Presents the environmental impact of papermaking industries. Excerpt from *The Art of Paper Making: A Practical Handbook of the Manufacture of Paper From Rags, Esparto, Straw and Other Fibrous Materials Including the Manufacture of Pulp From Wood Fibre*. In the present volume while

describing the various operations involved in the manufacture of paper the Author has endeavoured to render the work serviceable as a book of reference in respect to the processes and improvement which have from time been introduced and many of which have been more or less practically applied either at home or abroad The recovery of soda from waste liquors has been fully dealt with and the details of several applied processes explained Special attention has also been directed to some of the more important methods of producing pulp from wood fibre since it is highly probable that from this inexhaustible source the paper maker will ultimately derive much of the cellulose used in his manufacture Indeed it may be deemed equally probable when the processes for disintegrating wood fibre so largely applied in America and on the Continent become better understood in this country that their adoption here will become more extensive than has hitherto been the case About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
