Handbook of Food Factory Design Christopher G. J. Baker,2013-08-27 Food manufacturing has evolved over the centuries from kitchen industries to modern sophisticated production operations A typical food factory includes the food processing and packaging lines the buildings and exterior landscaping and the utility supply and waste treatment facilities As a single individual is unlikely to possess all the necessary skills required to facilitate the design the task will undoubtedly be undertaken by an interdisciplinary team employing a holistic approach based on a knowledge of the natural and biological sciences most engineering disciplines and relevant legislation In addition every successful project requires a competent project manager to ensure that all tasks are completed on time and within budget This Handbook attempts to compress comprehensive up to date coverage of these areas into a single volume It is hoped that it will prove to be of value across the food manufacturing community The multi disciplinary nature of the subject matter should facilitate more informed communication between individual specialists on the team It should also provide useful background information on food factory design for a wider range of professionals with a more peripheral interest in the subject for example process plant suppliers contractors HSE specialists retailers consultants and financial institutions Finally it is hoped that it will also prove to be a valuable reference for students and instructors in the areas of food technology chemical engineering and mechanical engineering in particular

Barbosa-Canovas, 2005-05-06 Although chemical engineering and food technology are subject areas closely related to food processing systems and food plant design coverage of the design of food plants is often sporadic and inadequately addressed in food technology and engineering books Some books have attempted to treat food engineering from this dual point of view but most have not achieved balanced coverage of the two Focusing on food processing rather than chemical plants Food Plant Design presents precise design details with photos and drawings of different types of food processing plants including food processing systems refrigeration and steam systems conveying systems and buildings The authors discuss the subject in an ordered format that gives you the tools to produce food products with minimum cost Including modeling procedures for food processing systems and auxiliary systems they elucidate synthesis techniques and procedures Using a clear structure for different levels of information and data on different food processing alternatives the book outlines solutions to plant design problems in the context of overall optimization of an agro industrial system and corresponding food chain It provides the work procedures and techniques for solving the design problems of a food processing plant and in making a defined food product      **Willing's Press Guide and Advertisers' Directory and Handbook** ,2006      **Handbook of Food Process Design** Jasim Ahmed, Shafiur Rahman, This book will offer a comprehensive account of the design of all major food processing systems including both established and novel unit operations The range of equipment available for any given process will be described including the basic theoretical principles and modes of operation Advantages and limitations of the equipment within various relevant parameters such as size processing time cost and energy requirements will be explained and schematic diagrams will be provided to show the stages of each process component in detail The book also covers computer aided design and control systems cost considerations and cleaning and sanitation methods Practical examples of process design scenarios will be included to help the reader in specifying and designing their own operations All chapters will follow the following format 1 Purpose of unit operation 2 What are the end products of the process 3 Process flow sheet material and energy balances and schematic diagram of the process and its components 4 Basic theoretical principles and mode of operations 5 Different types of equipment available with their advantages and limitations What are the parameters we need to know For example time energy size and other factors 6 Empirical data and rules of thumb used to facilitate the various design calculations simplified equations and shortcut methods 7 Simple equations tables and graphs to estimate the design parameters 8 Process control operations and maintenance of the unit operations 9 Advanced levels of process design for complicated systems Computer aided process plant design 10 Cleaning and sanitation methods 11 Capital and operating cost for different size of the equipments 12 Summary and future needs 13 Worked out examples related to design      **Consultants and Consulting Organizations Directory** ,2006      Design News ,2004      *Aluminum Now* ,2006      **Willing's Press Guide** ,2004 Coverage of publications outside the UK and in non English languages expands steadily until in 1991 it occupies enough of
