dermatitis irritation allergy and urticaria to then encapsulate modern approaches to the evaluation of chemical hazards in this area by critically reviewing the test methodologies involved and finally to illustrate how the risks presented may be assessed This last point is a critical area since methods for the identification of these hazards at least for skin irritation and sensitisation have been available for some years However the understanding of how to measure the potency of these hazards and so enable a proper risk assessment is only now becoming a more tractable and thus transparent activity Better and more consistent risk assessments are the optimal route to the reduction of the morbidity presented by the skin disorders described in this book This timely book is essential reading for toxicologists dermatologists occupational health specialists allergologists and those with an interest in risk assessment and safety evaluation
