Polycarpou, 2006 This is an introduction to the finite element method with applications in electromagnetics Author Anastasis Polycarpou begins with the basics of the method including formulating a boundary value problem using a weighted residual method and the Galerkin approach followed by the imposition of all three types of boundary conditions including absorbing boundary conditions Another important topic of emphasis is the development of shape functions including those of higher order This book provides the reader with all information necessary to apply the finite element method to one and two dimensional boundary value problems in electromagnetics BOOK JACKET [An Introduction to Classical Electromagnetic Radiation](#) Glenn S. Smith, 1997-08-13 This book provides a thorough description of classical electromagnetic radiation starting from Maxwell's equations and moving on to show how fundamental concepts are applied in a wide variety of examples from areas such as classical optics antenna analysis and electromagnetic scattering Throughout the author interweaves theoretical and experimental results to help give insight into the physical and historical foundations of the subject A key feature of the book is that pulsed and time harmonic signals are presented on an equal footing Mathematical and physical explanations are enhanced by a wealth of illustrations over 300 and the book includes more than 140 problems It can be used as a textbook for advanced undergraduate and graduate courses in electrical engineering and physics and will also be of interest to scientists and engineers working in applied electromagnetics A solutions manual is available on request for lecturers adopting the text **Introductory Electromagnetics** Zoya B. Popović, Branko D.
