The CRC Handbook of Mechanical Engineering, Second Edition ,1998-03-24 During the past 20 years the field of mechanical engineering has undergone enormous changes These changes have been driven by many factors including the development of computer technology worldwide competition in industry improvements in the flow of information satellite communication real time monitoring increased energy efficiency robotics automatic control increased sensitivity to environmental impacts of human activities advances in design and manufacturing methods These developments have put more stress on mechanical engineering education making it increasingly difficult to cover all the topics that a professional engineer will need in his or her career As a result of these developments there has been a growing need for a handbook that can serve the professional community by providing relevant background and current information in the field of mechanical engineering The CRC Handbook of Mechanical Engineering serves the needs of the professional engineer as a resource of information into the next century

Thermodynamic Optimization of Complex Energy Systems Adrian Bejan, Eden Mamut, 2012-12-06 A comprehensive assessment of the methodologies of thermodynamic optimization exergy analysis and thermoeconomics and their application to the design of efficient and environmentally sound energy systems The chapters are organized in a sequence that begins with pure thermodynamics and progresses towards the blending of thermodynamics with other disciplines such as heat transfer and cost accounting Three methods of analysis stand out entropy generation minimization exergy or availability analysis and thermoeconomics The book reviews current directions in a field that is both extremely important and intellectually alive Additionally new directions for research on thermodynamics and optimization are revealed

Sustainable Design for Renewable Processes Mariano Martin, 2021-10-31 Sustainable Design for Renewable Processes Principles and Case Studies covers the basic technologies to collect and process renewable resources and raw materials and transform them into useful products Starting with basic principles on process analysis integration and optimization that also addresses challenges the book then discusses applied principles using a number of examples and case studies that cover biomass waste solar water and wind as resources along with a set of technologies including gasification pyrolysis hydrolysis digestion fermentation solar thermal solar photovoltaics electrolysis energy storage etc The book includes examples exercises and models using Python Julia MATLAB GAMS EXCEL CHEMCAD or ASPEN This book shows students the challenges posed by renewable based processes by presenting fundamentals case studies and step by step analyses of renewable resources Hence this is an ideal and comprehensive reference for Masters and PhD students engineers and designers Addresses the fundamentals and applications of renewable energy process design for all major resources including biomass solar wind geothermal waste and water Provides detailed case studies step by step instructions and guidance for each renewable energy technology Presents models and simulations for a wide variety of platforms including state of the art and open access platforms in addition to well known commercial software
