

CHAPTER 1

INTRODUCTION

Chapter 1 emphasizes the internationalization of business and economic activity that has occurred since the end of World War II. Although international business activities have existed for centuries, primarily in the form of exporting and importing, it is only in the postwar period that multinational firms have become preeminent. The distinguishing characteristic of the MNC is its emphasis on global, rather than affiliate, performance. Specifically, MNCs ask, "Where in the world should we build our plants, sell our products, raise capital, and hire personnel?" Thus the true multinational is characterized more by attitude than the physical reality of an integrated system of marketing and production activities worldwide. It involves looking beyond the boundaries of the home country, and treating the world as "our oyster." Good examples include the globalization of GE's medical systems division and Arco Chemical.

After stimulating student interest with this vision of the MNC, I then introduce the financial decisions that multinationals must make. I begin by discussing the key concepts and lessons from domestic finance that apply directly to international corporate finance. The lessons include the emphasis on cash flow rather than accounting earnings, the time value of money, the importance of taxes, and the unwillingness of investors to reward companies for activities (like corporate diversification) which investors could replicate for themselves at no greater cost.

The key concepts, which I point out will arise time and again in the course, are arbitrage, market efficiency, and the separation of risk into systematic risk, which must be rewarded, and unsystematic risk, which is not rewarded. The latter concept, of course, is the intuition underlying both the capital asset pricing model (CAPM) and the arbitrage pricing theory (APT). Although imperfect, the theoretical framework of domestic corporate finance provides a useful frame of reference, and understanding it is essential before proceeding with the more complex aspects of international financial management. I devote some time to explaining that total risk matters, even if the CAPM or APT holds. Otherwise the astute student will see a conflict between the irrelevance of unsystematic risk and hedging activities.

I then outline the key decision areas in international financial management: foreign exchange risk management, managing working capital and the internal financial system, financing foreign units, capital budgeting, and evaluation and control. I emphasize the additional parameters that MNC financial executives must cope with, including multiple currencies, rates of inflation, tax systems, and capital markets, as well as foreign exchange and political risks.

SUGGESTED ANSWERS TO "GENERAL ELECTRIC GLOBALIZES"

1. What advantages does General Electric seek to attain from its international business activities?

ANSWER. Aside from gaining access to markets worldwide, GE focuses on taking advantage of its global reach to find less expensive materials abroad and intellectual capital, thereby lowering its cost of designing and manufacturing products.

2. What actions is it taking to gain these advantages from its international activities?

ANSWER. GE is acquiring companies abroad, and setting up joint ventures with other foreign companies, to gain their assets and ability to service local customers. It is setting up manufacturing facilities abroad to access lower cost labor and materials and also sourcing more purchases abroad for the same reasons. It also is identifying and hiring engineering and scientific talent from around the world to boost its intellectual capital and is setting up R&D facilities where this talent can work.

British Books in Print ,1986 Financial Innovations in International Debt Management Walter Berger,1990 The international debt problem has already generated a huge number of publications Why then another publication Many publications address macroeconomic implications of the debt problem others investigate special new financing instruments such as debt equity swaps others discuss the economic or legal aspects of debt reschedulings This work of Walter Berger concentrates on the

evolution of the financial side of the debt problem This evolution is fascinating since it reveals a continuous expansion of the financial instruments being used and a surprising change in intercreditor relationships While in the seventies equal treatment of creditors was not of much concern this changed dramatically in the eighties But lately equal treatment turned out to be a strong impediment to the creditors management of loan portfolios Hence inequality of treatment is growing again This development represents a challenge to everyone who tries to explain legal changes by using economic theory Another characteristic of Walter Berger s work is that he starts from a broad institutional perspective Most economists analyze the debt problem by assuming a world where everybody follows the same principles of rationality and optimization Walter Berger questions this approach by arguing that cultural discrepancies among creditor countries and indebted countries make it difficult to define efficiency by Western standards only Moreover different cultures create what Berger calls institutional obfuscation that is creditors have substantial difficulties to predict the behavior of differently minded debtors and vice versa This lack of information creates a transaction risk for each contracting party
