Foundation PHP 5 for Flash David Powers,2006-11-03 Our original Foundation PHP for Flash title was rightly regarded as a must have when it came to wanting to learn just how to make your Flash sites make use of backend technologies that was published way back in the days of Flash 5 and PHP 4 and things move pretty fast in the world of web design This latest completely rewritten edition again brings together three of the web s hottest technologies Flash the server side language PHP and the MySQL database system We ve brought things back up to date using ActionScript 2 0 PHP 5 0 and MySQL 4 1 the book has been designed to be version neutral In other words you can be confident that you re working with the latest standards but that your applications won t break if deployed on an older server The book also provides a brief introduction to an alternative database system SQLite which is now automatically bundled with PHP 5 and requires no installation At each stage of the book you ll be given an overview of a new area of PHP MySQL introducing you to the syntax while showing how it compares to ActionScript and how it integrates with Flash to produce increasingly complicated applications For example earlier chapters cover things such as getting data from PHP to Flash and back again variables arrays string manipulation validating user input and feedback forms Later on it moves on to more advanced subjects such as creating databases via the MySQL console and via phpMyAdmin manipulating database data via a Flash interface displaying data from an RSS feed in Flash persisting data with sessions and creating a full blown content management system In addition to get you up and running the book features a detailed guide to setting up your environment PHP MySQL and the Apache web server along with extensive troubleshooting information PHP is the language of choice on nearly 18 million domains and MySQL has more than five million active users including industry leaders like Google the Associated Press Sony and NASA They re open source and free and with the help of this book you ll see that they re easy and fun to learn

PHP Solutions David Powers,2007-04-30 You want to make your websites more dynamic by adding a feedback form creating a private area where members can upload images that are automatically resized or perhaps storing all your content in a database The problem is you re not a programmer and the thought of writing code sends a chill up your spine Or maybe you ve dabbled a bit in PHP and MySQL but you can t get past baby steps If this describes you then you ve just found the right book PHP and the MySQL database are deservedly the most popular combination for creating dynamic websites They re free easy to use and provided by many web hosting companies in their standard packages Unfortunately most PHP books either expect you to be an expert already or force you to go through endless exercises of little practical value In contrast this book gives you real value right away through a series of practical examples that you can incorporate directly into your sites optimizing performance and adding functionality such as file uploading email feedback forms image galleries content management systems and much more Each solution is created with not only functionality in mind but also visual design But this book doesn t just provide a collection of ready made scripts each PHP solution builds on what s gone before teaching you the basics of PHP and database design quickly and painlessly By the

end of the book you'll have the confidence to start writing your own scripts or if you prefer to leave that task to others to adapt existing scripts to your own requirements. Right from the start you're shown how easy it is to protect your sites by adopting secure coding practices. The book has been written with an eye on forward and backward compatibility, recommending PHP 5 techniques but providing alternative solutions for servers still running PHP 4.3. All database examples demonstrate how to use the original MySQL extension MySQL Improved or the PHP Data Objects PDO introduced in PHP 5.1, letting you choose the most suitable option for your setup.
