Volkswagen Beetles and Buses Russell Hayes,2020-10-06 This illustrated history celebrates the 75th and 70th anniversaries of Volkswagen's two most iconic vehicles from the first Beetles spearheaded by Ferdinand Porsche in the 1940s to the buses that became synonymous with a generation. Volkswagen is one of the most beloved brands in motoring history thanks largely to two instantly recognizable vehicles: the Beetle and the Bus. More than 23 million VW Beetles have buzzed into the world since 1945, while the VW Bus presaged the minivan by thirty-plus years. Volkswagen Beetles and Buses examines and celebrates all aspects of the vehicles and the many cultural associations that have swirled around them for more than seven decades. The diminutive rear-engineered and easily mass-produced Beetle became the most popular imported car in America during the 1960s. Its success was due to its familiar face, its wildly clever ad campaigns, and the sheer numbers produced. The equally compact yet spacious Bus, aka the Kombi, Microbus, Type 2, Transporter, and simply van, has won millions of fans around the world with its practicality, simplicity, and design. In this beautifully illustrated and authoritatively written celebration, author Russell Hayes looks back at the vehicles while focusing on the classic air-cooled VWs that ran into the late 1970s. Along the way, readers witness the Beetle and Bus at work and at play and learn about vehicle development and growing roles in popular culture, including star appearances in films like *The Love Bug*, *Little Miss Sunshine*, *Footloose*, *Fight Club*, *The Big Lebowski*, and *Fast Times at Ridgemont High*, as well as television shows like *Lost* and *Once Upon a Time*, and on the covers of the Beatles' *Abbey Road* and Bob Dylan's *Freewheelin'* album. The story is brought up to date with coverage of the New Beetle and plans for the VW Buzz, a modern electric version of the iconic Microbus due in 2022. Volkswagen Beetles and Buses deserves a place in the motoring libraries of VW owners, automotive enthusiasts, and those simply interested in pop culture. It's the ultimate illustrated history of these beloved vehicles.

Australian Beetles Volume 2 Adam Slipinski, John Lawrence, 2019-11-01 This three-volume series represents a comprehensive treatment of the beetles of Australia, a relatively understudied fauna that includes many unusual and unique lineages found nowhere else on Earth. Volume 2 contains 36 chapters providing critical information and identification keys to the genera of the Australian beetle families included in suborders Archostemata, Myxophaga, Adephegata, and several groups of Polyphaga: Scirtoidea, Hydrophiloidea, Scarabaeoidea, Buprestoidea, and Tenebrionidae. Each chapter is richly illustrated in black and white drawings and photographs. The book also includes colour habitus figures for about 1000 Australian beetle genera and subgenera belonging to the families treated in this volume. This volume is a truly international collaborative effort as the chapters have been written by 23 contributors from Australia, China, Czech Republic, Germany, Italy, Poland, and USA.

Although the Coleoptera are the largest order of animals and make up about 25% of all species currently living on Earth there have been very few specialists working on early fossil Coleoptera so despite the group s importance the early evolutionary history of the beetles is poorly understood There is a substantial fossil record of Coleoptera originating in the early Permian The majority of these fossils are preserved as isolated elytra the hardened front wings of beetles In most cases fossil elytra are not useful for taxonomic identification however the very ornate elytra of the earliest Coleoptera include scales setae punctures spines and rudimentary venation features that are potentially meaningful in phylogenetic studies In this first cladistic analysis of Permian and Mesozoic Coleoptera and coleopteroids elytral characters are used to produce a character matrix which is phylogenetically analyzed using WinClada The resultant trees show that many of the traditional family arrangements of the early Coleoptera and coleopteroids are not supported by a cladistic analysis of elytral characters and are poly or paraphyletic A revised classification system is proposed The family Tshekardocoleidae is redefined to include only Tshekardocoleus ROHDENDORF Afrocupes GEERSTEMA AND VAN DER HEEVER and Brochocoleus HONG in part Two new families Moravocoleidae Moravocoleus KUKALOV Permocoleus LUBKIN AND ENGEL Prosperocoleus KUKALOV and Sylvacoleidae Boscoleus KUKALOV Sylvacoleus PONOMARENKO Umoricoleus KUKALOV are created to include some former members of Tshekardocoleidae Further taxonomic revision of the families Permocupedidae Ommatidae and Cupedidae is still needed but this study provides a framework for further study of the earliest beetles Because fossil beetles are most commonly known only from elytral remains a key to Paleozoic and Mesozoic elytra resembling Archostemata is constructed using only elytral characters to aid in the identification of fossil beetles Two significant fossil Coleoptera are described Paracupes svitkoi LUBKIN from a remarkably preserved ninety million year old beetle head from New Jersey and Permocoleus wellingtonensis LUBKIN AND ENGEL the earliest known beetle from the Western Hemisphere These studies show that on the family level the diversity of early Coleoptera and Coleopteroids is far greater than previously thought
