

BASIC GASKET APPLICATION GUIDE & MATERIAL SELECTION

Application / Function

Dynamic gaskets are generally used to seal and support the sliding, the rotation of the ends of a shaft to allow movement. These consist of a gasket and a dynamic seal. There is a gasket with an application on all three and both manufacturers used to increase the quality. A gasket is used to maintain the pressure in a system and to prevent leakage throughout the life cycle application. The gasket is composed of two components: the main gasket and the seal. The seal is used to maintain contact between the gasket and the shaft. The gasket is used to maintain contact between the mating surfaces. If the gasket is not properly installed, it can cause leakage and damage to the system. The gasket is used to maintain contact between the mating surfaces.

In order to determine the application requirements, the gasket designer is required to determine the gasket requirements. Every gasket application is unique and every application requires that the gasket be selected to meet the requirements of the application. The gasket designer is required to determine the gasket requirements.
