*Handbook of Cane Sugar Engineering* E. Hugot, 2014-05-12 *Handbook of Cane Sugar Engineering* focuses on the technologies equipment methodologies and processes involved in cane sugar engineering The handbook first underscores the delivery unloading and handling of cane cane carrier and knives and tramp iron separators The text then examines crushers shredders combinations of cane preparators and feeding of mills and conveying bagasse The manuscript takes a look at roller grooving pressures in milling mill speeds and capacity and mill settings Topics include setting of feed and delivery openings and trash plate factors influencing capacity formula for capacity fiber loading tonnage records linear speed and speed of rotation sequence of speeds hydraulic pressure and types of roller grooving The book then elaborates on electric and turbine mill drives mill gearing construction of mills extraction milling control purification of juice filtration evaporation sugar boiling and centrifugal separation The handbook is a valuable source of data for engineers involved in sugar cane engineering

*Handbook of Cane Sugar Engineering* Emile Hugot, 1986 Hugot s *Handbook of Cane Sugar Engineering* needs little introduction it can be found in technical libraries in cane sugar producing countries all over the world Unique in the extent and thoroughness of its coverage the book has for many years provided the only complete description of cane sugar manufacture mills diffusers boilers and other factory machinery calculation methods of capacity for every piece of equipment and process and manufacturing techniques This new edition has been extensively revised Information that has become obsolete or of little interest has been deleted or severely shortened Detailed additions have been made to chapters dealing with recently developed equipment An entirely new chapter has been added on automation and data processing Numerous figures graphs drawings photographs tables and formulae are provided The metric system has been used throughout the book but because many factories still use the British units all measures formulae and tables and nearly all calculations have been given in both systems

***Handbook of Cane Sugar Engineering*** Emile Hugot, 1972 ***Cane Sugar Engineering*** Peter Rein, 2007 *Introduction to Cane Sugar Technology* G. H. Jenkins, 2013-09-03 *Introduction to Cane Sugar Technology* provides a concise introduction to sugar technology more specifically cane sugar technology up to the production of raw sugar Being intended originally for use in a post graduate university course the book assumes a knowledge of elementary chemical engineering as well as adequate knowledge of chemistry In the field of sugar manufacture itself the object of the book is to place more emphasis on aspects which are not adequately covered elsewhere In accordance with this objective attention has been concentrated mainly on processes and operation of the factory and description of equipment is made as brief as possible with numerous references to other books where more detail is available The emphasis on operation rather than equipment has also been prompted by observation of quite a few factories in different countries where good equipment is giving less than its proper performance due to inefficient operation and supervision The book is confined to the raw sugar process which has been the author s main interest Refining is discussed only to the extent required to explain refiners

requirements concerning quality of raw sugar      **Handbook of Sugar Refining** Chung Chi Chou,2000-08-14 This book provides a reference work on the design and operation of cane sugar manufacturing facilities It covers cane sugar decolorization filtration evaporation and crystallization centrifugation drying and packaging      **Handbook of Cane Sugar Engineering** Paul Zindel,1972      **Life-Cycle Assessment of Biorefineries** Edgard Gnansounou,Ashok Pandey,2016-12-20 Life Cycle Assessment of Biorefineries the sixth and last book in the series on biomass biorefineries discusses the unprecedented growth and development in the emerging concept of a global bio based economy in which biomass based biorefineries have attained center stage for the production of fuels and chemicals It is envisaged that by 2020 a majority of chemicals currently being produced through a chemical route will be produced via a bio based route Agro industrial residues municipal solid wastes and forestry wastes have been considered as the most significant feedstocks for such bio refineries However for the techno economic success of such biorefineries it is of prime and utmost importance to understand their lifecycle assessment for various aspects Provides state of art information on the basics and fundamental principles of LCA for biorefineries Contains key features for the education and understanding of integrated biorefineries Presents models that are used to cope with land use changes and their effects on biorefineries Includes relevant case studies that illustrate main points      **Louisiana Planter and Sugar Manufacturer** ,1927      Sustainable Solutions for Modern Economies Rainer Höfer,2009 Outlines the contribution of chemistry and renewable chemical or biological resources to the sustainability concept and potential resolution of the world s energy problems      *Riegel's Handbook of Industrial Chemistry* James A. Kent,2012-12-06 The aim of this book is to present in a single volume an up to date account of the chemistry and chemical engineering which underlie the major areas of the chemical process industry This most recent edition includes several new chapters which comprise important threads in the industry s total fabric These new chapters cover waste minimization safety considerations in chemical plant design and operation emergency response planning and statistical applications in quality control and experimental planning Together with the chapters on chemical industry economics and wastewater treatment they provide a unifying base on which the reader can most effectively apply the information provided in the chapters which describe the various areas of the chemical process industries The ninth edition of this established reference work contains the contributions of some fifty experts from industry government and academe I have been humbled by the breadth and depth of their knowledge and expertise and by the willingness and enthusiasm with which they shared their knowledge and insights They have without exception been unstinting in their efforts to make their respective chapters as complete and informative as possible within the space available Errors of omission duplication and shortcomings in organization are mine Grateful acknowledgment is made to the editors of technical journals and publishing houses for permission to reproduce illustrations and other materials and to the many industrial concerns which contributed drawings and photographs Comments and criticisms by readers will be welcome      **The Journal of Industrial and Engineering Chemistry** ,1914

Fraser-Reid, Kuniaki Tatsuta, Joachim Thiem, 2008-04-14 As a reflection of the quantum leap that has been made in the study of glycostructures the first edition of this book has been completely revised and updated The editors give up to date information on glycostructures their chemistry and chemical biology in the form of a completely comprehensive survey Glycostructures play highly diverse and crucial roles in a myriad of organisms and important systems in biology physiology medicine bioengineering and technology Only in recent years have the tools been developed to partly understand the highly complex functions and the chemistry behind them While many facts remain undiscovered this MRW has been contributed to by a large number of the world's leading researchers in the field
