MECANISMOS PLANOS Edgar Absalón Torres Barahona, Edwin Francis Cárdenas Correa, 2024-09-12

Este libro presenta tres alternativas para el análisis cinemático de mecanismos planos mediante el método vectorial y el método de números complejos con el fin de desarrollar una comprensión amplia y básica de la cinemática de los mecanismos. Está dirigido a profesionales y estudiantes de ingeniería como un referente que indica a través de diferentes ejercicios desarrollados alternativas para el análisis de mecanismos. En el primer capítulo y en la primera parte de los demás se hace un breve análisis de los fundamentos necesarios para abordar las tres metodologías de análisis. Además en la parte final del primer capítulo se hace una presentación de los mecanismos analizados cinemáticamente en los capítulos subsiguientes. Con el método vectorial del segundo capítulo se hace una presentación básica para el análisis cinemático de mecanismos en una posición particular. Este método además se utiliza como referencia para validar los resultados de otras metodologías como la vectorial o de número complejo presentadas en los capítulos 3 y 4. El análisis vectorial del capítulo 3 hace uso de vectores para representar las posiciones, las velocidades y las aceleraciones así como para representar relaciones de dirección y sentido entre distintos elementos del mecanismo. De forma similar al capítulo 3 en el capítulo 4 se emplean números complejos para representar las magnitudes vectoriales simplificando el cálculo de las cantidades involucradas. Para finalizar en el capítulo 5 se presenta el uso de las herramientas computacionales MATLAB o GNU Octave para programar los modelos matemáticos desarrollados en los capítulos 3 y 4 y establecer el comportamiento de un mecanismo en función de las condiciones de entrada. Los resultados obtenidos en este capítulo son validados mediante el uso del método vectorial del capítulo 2. En general este texto sobre cinemática de mecanismos planos proporciona una base teórica y práctica para comprender cómo se mueven y posicionan los componentes de un mecanismo utilizando herramientas analíticas y gráficas para el estudio de sistemas mecánicos.

The International Symposium on Dynamics of Vehicles on Roads and Tracks is the leading international gathering of scientists and engineers from academia and industry in the field of ground vehicle dynamics to present and exchange their latest innovations and breakthroughs. Established in Vienna in 1977 the International Association of Vehicle System Dynamics IAVSD has since held its biennial symposia throughout Europe and in the USA, Canada, Japan, South Africa and China. The main objectives of IAVSD are to promote the development of the science of vehicle dynamics and to encourage engineering applications of this field of science to inform scientists and engineers on the current state of the art in the field of vehicle dynamics and to broaden contacts among persons and organisations of the various countries engaged in scientific research and development in the field of vehicle dynamics and related areas. IAVSD 2017 the 25th Symposium of the International Association of Vehicle System Dynamics was hosted by the Centre for Railway Engineering at Central

Queensland University Rockhampton Australia in August 2017 The symposium focused on the following topics related to road and rail vehicles and trains dynamics and stability vibration and comfort suspension steering traction and braking active safety systems advanced driver assistance systems autonomous road and rail vehicles adhesion and friction wheel rail contact tyre road interaction aerodynamics and crosswind pantograph catenary dynamics modelling and simulation driver vehicle interaction field and laboratory testing vehicle control and mechatronics performance and optimization instrumentation and condition monitoring and environmental considerations Providing a comprehensive review of the latest innovative developments and practical applications in road and rail vehicle dynamics the 213 papers now published in these proceedings will contribute greatly to a better understanding of related problems and will serve as a reference for researchers and engineers active in this specialised field Volume 2 contains 135 papers under the subject heading Rail
