The Highway Capacity Manual: A Conceptual and Research History Roger . P Roess,Elena . S Prassas,2014-04-03 Since 1950 the Highway Capacity Manual has been a standard used in the planning design analysis and operation of virtually any highway traffic facility in the United States. It has also been widely used abroad and has spurred the development of similar manuals in other countries. The twin concepts of capacity and level of service have been developed in the manual and methodologies have been presented that allow highway traffic facilities to be designed on a common basis and allow for the analysis of operational quality under various traffic demand scenarios. The manual also addresses related pedestrian bicycle and transit issues. This book details the fundamental development of the concepts of capacity and level of service and of the specific methodologies developed to describe them over a wide range of facility types. The book is comprised of two volumes. Volume 1 this book focuses on the development of basic principles and their application to uninterrupted flow facilities freeways multilane highways and two lane highways. Weaving merging and diverging segments on freeways and multilane highways are also discussed in detail. Volume 2 focuses on interrupted flow facilities signalized and unsignalized intersections urban streets and arterials. It is intended to help users of the manual understand how concepts approaches and specific methodologies were developed and to understand the underlying principles that each embodies. It is also intended to act as a basic reference for current and future researchers who will continue to develop new and improved capacity analysis methodologies for many years to come.

Operational Analysis of Collector - Distributor Systems Thomas E. Mulinazzi,1993 This document consists of three sections each with its own table of contents and independent numbering. Part I Operational Analysis of Collector Distributor Systems develops a procedure for capacity analysis of Collector Distributor C D roads between successive interchanges. The description of the capacity analysis procedure generally follows the 1985 Highway Capacity Manual procedures however a new procedure developed in July 1990 at the University of California Berkeley is used for the weaving sections. There is a completed example of the entire procedure for the existing Roe Nall and the once proposed braided ramp systems on I 435 in Johnson County Kansas. This study also identified problems at the merge diverge areas of the system as a result of the concentration of two freeway diverging flows at one off ramp.

junction and the accumulation of two C D merging flows at one on ramp junction Configuration changes such as the addition of an auxiliary lane at the merge location and a second off ramp between the interchanges for the diverge area were also analyzed for comparative purposes Part II Operational Analysis of the Full Cloverleaf Interchange Equipped with Collector Distributor Roads describes the advantages of the C D interchange a methodology to analyze the interchange and some of the problems associated with the analysis The study demonstrates the analysis procedure and reveals that the merge and diverge points become problem areas of the interchange when C D roads are added Therefore the improvements made by moving the weaving area off the mainline should be compared to the decreased level of service at the merge diverge areas The study recommends auxiliary lanes for both the merge and diverge areas when C D interchanges are being considered Part III is the Technical Appendix for Part II Traffic Analysis Toolbox: Decision support methodology for selecting traffic analysis tools ,2004 **Freeway Management and Operations** National Research Council (U.S.).
