created by the combination of the individual markets In the Andean Common Market the importance attached to the expectation of the gains from industrialization was expressed in the formulation of Sectorial Programs of Industrial Development Other integration schemes among less developed countries have not addressed the issue of import substituting industrialization in such detailed manner In the first section of this chapter the importance of the topic of allocating industries in integration schemes among less developed countries is discussed It is argued that the benefits to be derived from increased trade in the traditional products of the member countries are minimal Instead the member countries expect the benefits from economic integration schemes to be derived from the utilization of the opportunities for industrialization created by such schemes

Models for Public Systems Analysis Edward J. Beltrami, 2013-09-17 Models for Public Systems Analysis considers the mathematical model formulation to improve the delivery of urban service systems such as sanitation fire police and ambulances This book is composed of five chapters that demonstrate the translation of significant societal problems into a mathematical framework as well as the

advantages and limitations of these models Chapter 1 deals with the issue of plant location and siting questions with a brief overview of water resource modeling while Chapter 2 provides set covering models for manpower scheduling as a direct outgrowth of the author's experience with the Sanitation Department in New York City Chapters 3 and 4 describe the delivery of emergency services particularly with models of congestion and delay and of optimal deployment These chapters also present probabilistic analysis in nature since both the spatial and the temporal patterns of demand are intrinsically uncertain The tools used are queueing theory and geometric probability Chapter 5 examines network optimization methods mainly to explore questions of vehicle routing and scheduling This chapter also provides a few comments on large scale models of urban growth these being generally more familiar to the regional planner than to the operations analyst This book will prove useful to applied mathematics and policy science students
