Low-Level Radio Frequency Systems

Stefan Simrock,Zheqiao Geng,2022-03-02 This book begins with an overview of the RF control concepts and strategies It

then introduces RF system models for optimizing the system parameters to satisfy beam requirements and for controller

design In addition to systematically discussing the RF field control algorithms it presents typical architecture and algorithms

for RF signal detection and actuation Further the book addresses the analysis of the noise and nonlinearity in LLRF systems

to provide a better understanding of the performance of the RF control system and to specify the performance requirements

for different parts of the RF system Today accelerators require increased RF stability and more complex operation scenarios

such as providing beam for different beam lines with various parameters and as a result LLRF systems are becoming more

critical and complex This means that LLRF system developers need have extensive knowledge of the entire accelerator

complex and a wide range of other areas including RF and digital signal processing noise analysis accelerator physics and

systems engineering Providing a comprehensive introduction to the basic theories algorithms and technologies this book

enables LLRF system developers to systematically gain the knowledge required to specify design and implement LLRF

systems and integrate them with beam acceleration It is intended for graduate students professional engineers and

researchers in accelerator physics
