chapter are intended to help students master the course material and to explore more advanced topics Many calculations exploit the extraordinary capabilities of computer programs such as Mathematica MatLab and Maple Students are urged to use these programs just as they had been urged to use calculators in the past The treatment of various topics is rather complete in that most steps in derivations are included Several of the chapters go beyond what is traditionally covered in an introductory course The goal of the presentation is to provide the students with a solid background in quantum mechanics

complicated than differentiate the product of two functions On the other hand the introduction to new physical ideas is based on an attempt to get right to the heart of the matter from the start Thus much less emphasis than usual is put on wave functions and the Schrödinger equation turns up as a special case of the eigenvalue equations which determine the possible values of any quantum observable Preface
