Albrecht, 2012-12-06 Artificial neural networks and genetic algorithms both are areas of research which have their origins in mathematical models constructed in order to gain understanding of important natural processes By focussing on the process models rather than the processes themselves significant new computational techniques have evolved which have found application in a large number of diverse fields This diversity is reflected in the topics which are subjects of the contributions to this volume There are contributions reporting successful applications of the technology to the solution of industrial commercial problems This may well reflect the maturity of the technology notably in the sense that real users of modelling prediction techniques are prepared to accept neural networks as a valid paradigm Theoretical issues also receive attention notably in connection with

the radial basis function neural network Contributions in the field of genetic algorithms reflect the wide range of current applications including for example portfolio selection filter design frequency assignment tuning of nonlinear PID controllers These techniques are also used extensively for combinatorial optimisation problems

Mathematical Statistics: Exercises and Solutions Jun Shao, 2006-06-26 Since the publication of my book *Mathematical Statistics* Shao 2003 I have been asked many times for a solution manual to the exercises in my book Without doubt exercises form an important part of a textbook on mathematical statistics not only in training students for their research ability in mathematical statistics but also in presenting many additional results as complementary material to the main text Written solutions to these exercises are important for students who initially do not have the skills in solving these exercises completely and are very helpful for instructors of a mathematical statistics course whether or not my book *Mathematical Statistics* is used as the textbook in providing answers to students as well as finding additional examples to the main text

Mo vated by this and encouraged by some of my colleagues and Springer Verlag editor John Kimmel I have completed this book *Mathematical Statistics Exercises and Solutions* This book consists of solutions to 400 exercises over 95% of which are in my book *Mathematical Statistics* Many of them are standard exercises that also appear in other textbooks listed in the references It is only a partial solution manual to *Mathematical Statistics* which contains over 900 exercises
