Multijet Engine:

Common Rail System for GDI Engines Giovanni Fiengo, Alessandro di Gaeta, Angelo Palladino, Veniero Giglio, 2012-11-02

Progressive reductions in vehicle emission requirements have forced the automotive industry to invest in research and development of alternative control strategies. Continual control action exerted by a dedicated electronic control unit ensures that best performance in terms of pollutant emissions and power density is married with driveability and diagnostics. Gasoline direct injection GDI engine technology is a way to attain these goals. This brief describes the functioning of a GDI engine equipped with a common rail CR system and the devices necessary to run test bench experiments in detail. The text should prove instructive to researchers in engine control and students are recommended to this brief as their first approach to this technology. Later chapters of the brief relate an innovative strategy designed to assist with the engine management system injection pressure regulation for fuel pressure stabilization in the CR fuel line is proposed and validated by experiment. The resulting control scheme is composed of a feedback integral action and a static model based feed forward action the gains of which are scheduled as a function of fundamental plant parameters. The tuning of closed loop performance is supported by an analysis of the phase margin and the sensitivity function. Experimental results confirm the effectiveness of the control algorithm in regulating the mean value rail pressure independently from engine working conditions engine speed and time of injection with limited design effort.

Diesel Engines - Current Challenges and Future Perspectives Hasan

Koten, 2024-05-22 This book discusses the current technology and future status of diesel engines. While gasoline engines are preferred for speed and jet engines diesel engines are widely used in vehicles and machinery that require torque such as ships, trains, tanks, unmanned aerial vehicles (UAVs) and heavy duty vehicles. Some recent research on global climate change has focused on obtaining zero carbon zero emissions and decarbonization via clean combustion technologies. For this reason restrictive emission regulations have forced engine manufacturers and research centers to turn to different technologies to achieve clean combustion in diesel engines. This book focuses on different combustion technologies from artificial intelligence applications in diesel engines to alternative fuels. It discusses the roles of artificial intelligence in the design of diesel engines, the use of different fuels in diesel engines and the effects of these on the performance and emission values of diesel engines. Solving the challenge of hydrogen storage in hydrogen fed diesel engines will open a new era for internal combustion engines. In particular the use of hydrogen fuel produced by the reaction of chemical ingredients with water in diesel engine cycles will have a significant impact on the industry. This book which brings together the latest studies on clean combustion technologies is an interesting resource for both industry and research centers.

Automotive Engines A.K. Babu, V. Antony Aroul Raj, This book is designed to meet the requirements of the students of Mechanical Engineering and Automobile Engineering. It is based on the latest syllabi prescribed by different Technical Colleges and Universities in India. Each chapter is describes in simple non technical language and explains by clear illustrations that how engine parts and systems are

constructed how the part works and what is required to maximize performance in terms of power speed economy and safety The important short and long review questions which the are included at the end of each chapter are taken from previous semesters question papers of various Technical colleges and Universities This book is intended to be used as a Text and for Reference by colleges and technical universities offering subjects like Automotive Engines and Internal Combustion Engines

New Generation of Engine... Pierre Duret, There is growing interest in the new generation of engine combustion processes that are emerging from research and development projects worldwide The new combustion processes generally bring about significant improvements in fuel economy combined with ultra low emissions of pollutants The French Petroleum Institute an internationally recognized expert in new engine combustion processes organized an international congress whose proceedings are presented in this book The meeting provided an opportunity for experts from the automotive industry the heavy duty and small engine sectors OEM suppliers fuel companies and R D organizations to exchange views on the chances of success of newly developed engine combustion processes Advances in Automation, Mechanical and Design Engineering Med Amine Laribi, Giuseppe Carbone, Zhiyu Jiang, 2022-09-02 This book presents the proceedings of the 2021 International Symposium on Automation Mechanical and Design Engineering SAMDE held in Beijing China on 3 5 December 2021 and organized by the Hong Kong Society of Robotics and Automation HKSRA It gathers contributions by researchers from several countries on the following topics digitalized development and use of sustainable products and manufacturing systems artificial intelligence automated reasoning human robot collaborative interaction sensors and autonomous sensor systems cyber physical control systems generative design including topology optimization advanced simulation and modelling intelligent automation smart materials materials processing and factories and circular economy etc The book offers a source of information and inspiration for researchers seeking to improve their work and gather new ideas for future developments

Electric & Hybrid Vehicles A.K.
