Intermediate Electromagnetic Theory Joseph V. Stewart, 2001 This invaluable text has been developed to provide students with more background on the applications of electricity and magnetism particularly with those topics which relate to current research For example waveguides both metal and dielectric are discussed more thoroughly than in most texts because they are an important laboratory tool and important components of modern communications In a sense this book modernizes the topics covered in the typical course on electricity and magnetism It provides not only solid background for the student who chooses a field which uses techniques requiring knowledge of electricity and magnetism but also general background for the physics major

*IUTAM Symposium on Mechanical and Electromagnetic Waves in Structured Media* Ross C. McPhedran, Lindsay C. Botten, Nicolae-A.P. Nicorovici, 2006-05-02 The IUTAM Symposium on Mechanical and Electromagnetic Waves in Structured Media took place at the University of Sydney from January 18 22 1999 It brought together leading researchers from eleven countries for a week long meeting with the aim of providing cross links between the communities studying related problems involving elastic and electromagnetic waves in structured materials After the meeting participants were invited to submit articles based on their presentations which were refereed and assembled to constitute these Proceedings The topics covered here represent areas at the forefront of research into elastic and electromagnetic waves They include effect of nonlinearity diffusion and multiple scattering on waves as well as asymptotic and numerical techniques Composite materials are discussed in depth with example systems ranging from dusty plasmas to a magneto elastic microstructured system Also included are studies of homogenisation that field which seeks to determine equivalent homogeneous systems which can give equivalent wave properties to structured materials and inverse problems in which waves are used as a probe to infer structural details concerning scattering systems There are also strong groups of papers on the localization of waves by random systems and photonic and phononic band gap materials These are being developed by analogue with semiconductors for electrons and hold out the promise of enabling designers to control the propagation of waves through materials in novel ways We would like to thank the other members of the Scientific Committee
