Exploring Machine Learning: A Beginners Perspective Dr. Raghuram Bhukya, 2021-04-20

Machine learning is a field of Artificial intelligence that provides algorithms that can learn and improve from experiences. Machine learning algorithms are turned as integral parts of today's digital life. Its applications include recommender systems, targeted campaigns, text categorization, computer vision, and auto security systems, etc. Machine learning is also considered as an essential part of data science due to its capability of providing predictive analytics capability in handling a variety of data and suitability for big data applications. Its capability for predictive analytics resulted from its general structure that is building statistical models out of training data. In other hand, easy scalability advantage of machine learning algorithms is making them to be suitable for big data applications. The different types of learning algorithms include supervised learning, unsupervised learning, reinforcement learning, feature learning, rule-based learning, Robot or expert system learning, sparse dictionary and anomaly detection. These learning algorithms can be realized by computing models, artificial neural networks, decision trees, support vector machines, regression analysis, Bayesian networks, Genetic algorithms, and soft computing. The familiar tools to implement machine learning algorithms include Python, R, Matlab, Scala, Clojure, and Ruby. Involving of such open source programming languages, tools, and social network communities makes the machine learning most progressing field of computer science. The machine learning life cycle includes defining project objectives, explore the types and format, modeling data to fit for machine learning algorithms, deciding suitable machine learning model, and implement and decide best result from data for decision making. These days machine learning is observing great interest by the society and it has turned as one of the significant responsibility of top level managers to transform their business in the profitable means by exploring its basic functionalities. The world is at the sheer of realizing a situation where machines will work in agreement with human being to work together, operation and advertise their services in a novel way which is targeted, valuable and well versed.
