emphasized the relevance of 1 increasing knowledge and protection of biodiversity and 2 assessing species climate driven extinction risks To achieve these goals we need to understand organism environment ecology evolution interactions at various levels of the biological hierarchy from molecules to ecosystems However we are still lacking a comprehensive understanding of the molecular mechanisms shaping phenotypic landscapes in the natural environment and under different global change scenarios To address such challenges a new strategic program was also launched by the European Molecular Biology Laboratory EMBL Molecules to Ecosystems to study life in context and provide new research avenues in molecular life sciences In this context the emerging disciplines of Marine Omics and Marine Systems Biology will be key to supporting innovative solutions in marine ecosystem conservation and blue bioeconomy for example uncover molecular traits underlying sensitivity tolerance to environmental change supporting assisted evolution approaches molecular targets that can be used for diagnostics monitoring and development of biotechnological applications
