Canals Of Amsterdam:

Amsterdam's Canal District Jan Nijman, 2020-09-10 In terms of design scale and blending of ecological and aesthetic function Amsterdam's seventeenth century Canal District is a European marvel Its survival for four centuries is a testament to its ingenuity reflected in its designation as a UNESCO World Heritage Site in 2010 The Canal District today is an extraordinary example of resilient historic design and cultural heritage in a living city but it is not without present day challenges in recent years its urban ecology has become subject to severe pressures of global tourism and supergentrification This edited volume brings together seventeen reputable scholars to debate questions about the origins evolution and future of the Canal District With these differing approaches and perspectives on the Canal District the contributions render a collection where the whole is much more than the sum of the parts The book breaks new ground in our understanding of the District's historic design its evolution over four hundred years and the fundamental issues in future facing strategies and policies While the main focus is clearly on Amsterdam the discussions in this collection have an important bearing on broader questions of urban historic preservation elsewhere and on questions about enduring urban design

Ministerie van Waterstaat,1914 The Canals of Amsterdam ,1993 The Environmental Impact of Cities Fabricio Chicca,Brenda Vale,Robert Vale,2022-12-29 The Environmental Impact of Cities assesses the environmental impact that comes from cities and their inhabitants demonstrating that our current political and economic systems are not environmentally sustainable because they are designed for endless growth in a system which is finite It is already well documented that political economic and social forces are capable of shaping cities and their expansion retraction gentrification re population industrialisation or de industrialisation However the links between these political and economic forces and the environmental impact they have on urban areas have yet to be numerically presented As a result it is not clear how our cities are affecting the environment meaning it is currently impossible to relate their economic political and social systems to their environmental performance This book examines a broad selection of cities covering a wide range of political systems geography cultural backgrounds and population size The environmental impact of the selected cities is calculated

using both ecological footprint and carbon emissions two of the most extensively available indices for measuring environmental impact The results are then considered in terms of political economic and social factors to ascertain the degree to which these factors are helping or hindering the reduction of the environmental impact of humans This book will be of great interest to students and scholars of sustainability urban planning urban design environmental sciences geography and sociology
