The Hyperboloidal Foliation Method Philippe G Lefloch, Yue Ma, 2014-11-27 The Hyperboloidal Foliation Method introduced in this monograph is based on a 3+1 foliation of Minkowski spacetime by hyperboloidal hypersurfaces This method allows the authors to establish global in time existence results for systems of nonlinear wave equations posed on a curved spacetime It also allows to encompass the wave equation and the Klein Gordon equation in a unified framework and consequently to establish a well posedness theory for a broad class of systems of nonlinear wave Klein Gordon equations This book requires certain natural null conditions on nonlinear interactions which are much less restrictive than the ones assumed in the existing literature This theory applies to systems arising in mathematical physics involving a massive scalar field such as the Dirac Klein Gordon systems

Applied Geotechnics

for Construction Projects, Volume 3 Ammar Dhouib, 2023-02-07 Geotechnical engineering is now a fundamental component of construction projects. The third volume of this book is its backbone, dedicated to foundations for civil and industrial construction projects. Applied Geotechnics for Construction Projects 3 first presents the basic theoretical principles and rules governing the designing and validation of foundations, shallow, semi-deep, and deep, then presents real foundation projects with a detailed comparison of the approaches and methods of calculating foundations in relation to the reference systems and rules in force, closely compared to and validated by the Eurocodes. The third chapter presents examples of foundation projects covering high side building rafts, strip footings, piles, and embankments, enriched by an unprecedented level of experience in the field of foundations for civil and industrial construction projects. It ends with examples of damage to foundations and practical appendices. Each chapter of this third volume is illustrated with photographs and measurements of construction sites and is built on both theory and experience in the field of foundations as a whole. The result is a combination of geotechnical expertise and lessons learned from experience, both of which are highly valuable in the field of applied geotechnics for construction projects.
