Oluwagbenga Afolabi, 2018-06-01 Seminar paper from the year 2018 in the subject Communications/Multimedia/Internet/New Technologies, grade 1.00/0.00 Saint Leo University, language English, abstract: Facebook has revolutionized the way people, end users, communicate with peers and close relatives; these users share personal information with Facebook. The platform, in turn, uses these users' information to match them with other users who share similarities in information through algorithms. The primary focus of this paper is on the security implications of users sharing their personal information on Facebook. Additionally, we will examine the recent data security breach on Facebook involving Cambridge Analytica and its implications for Facebook and other data mining entities. The analysis will examine the loophole exploited by third-party apps to gain elevated access to users' and sub-user data. We also want to establish if

Facebook is taken appropriate steps to safeguard user information by following the federal trade commission guidelines in protecting user information

**Cyber Security** Hacking Studios,2017-08-21 Imagine Yourself Having control over the websites your kids are visiting and the chat programs they use Never worry about getting your computer hacked your credit card information stolen family photos taken from you and your everyday life put at risk Having the best online safety systems sat up immediately to protect your business from hackers If so you ve come to the right place Most if not all of us who use technology are familiar with the concept that we need to protect ourselves online Cyber security is all about taking meaningful steps to ensure that we do not fall victim to hackers Many people think that employing adequate cyber security means that they download a free antivirus package every year which will completely protect them and any data and information on their computers This antivirus will ensure that no malicious files are never downloaded that they do not access any websites that could be dangerous that their identities will never be stolen and that they are generally

perfectly safe online However this idea is simply not true Hackers are growing more pernicious and sophisticated every year They have access to an entire arsenal of cyber weapons which are often exchanged on the black market Some of these weapons are powerful enough to bring down websites run by governments and even break into computer servers run by the United States The need for adequate cyber security is so great that companies spend hundreds of millions of dollars every year in order to protect themselves However for many they must learn the hard way before they implement the protections that they need they do so only after becoming the victims of security breaches Becoming a victim of a cyber hack can be an incredibly costly frustrating and time consuming process For companies the cost can be in the hundreds of millions of dollars If a corporation is hacked the personal data of millions of customers can be compromised the company then may have to reimburse those people for any fraudulent activity that may have occurred due to the hack The cost in terms of the company's reputation may be so severe that the company never fully recovers For individuals a computer hack can lead to identity theft which can lead to hundreds of thousands of dollars in fraudulent financial activity For both companies and individuals hacks can lead to sensitive data and information stored in a computer to become compromised This book will show you many easy things that you can do in order to protect yourself online It details many of the online threats that you can face such as describing what spyware and backdoors are In addition to describing the threats it lists different types of software that you can utilize to protect yourself against those threats As a bonus it talks about the different kinds of hackers so that you can be aware of what you are up against It talks about different methods that hackers use to gain access to your computer and what you can do to shield yourself from those methods being successful against you Many of the cyber security methods discussed in this book are either free or very very inexpensive However they can save you countless dollars and hours There is no way to 100% guarantee that you will not become the victim of a computer hacker However if you take meaningful steps to protect yourself online such as the ones described in this book you will make your computer significantly more difficult to hack Hopefully any hacker who has tried to target you will see that you are serious about cyber security and will move on to his or her next target If you want to learn how to best protect yourself online this book is definitely for you Using the measures advised in this book will help keep you safe from online threats and hacks BUY with ONE Click NOW
