Singh, B. K. Prasad, 1993 Marker-Assisted Plant Breeding: Principles and Practices B.D. Singh, A.K. Singh, 2015-06-26 Marker assisted plant breeding involves the application of molecular marker techniques and statistical and bioinformatics tools to achieve plant breeding objectives in a cost effective and time efficient manner This book is intended for beginners in the field who have little or no prior exposure to molecular markers and their applications but who do have a basic knowledge of genetics and plant breeding and some exposure to molecular biology An attempt has been made to provide sufficient basic information in an easy to follow format and also to discuss current issues and developments so as to offer comprehensive coverage of the subject matter The book will also be useful for breeders and research workers as it offers a broad range of up to the year information including aspects like the development of different molecular markers and their various applications In the first chapter the field of marker assisted plant breeding is introduced and placed in the proper perspective in relation to plant breeding The next three chapters describe the various molecular marker systems while mapping populations and mapping procedures including high throughput genotyping are discussed in the subsequent five chapters Four chapters are devoted to various applications of markers e.g marker assisted selection genomic selection diversity analysis finger printing and positional cloning In closing the last two chapters provide information on relevant bioinformatics tools and the rapidly evolving field of phenomics

Plant Breeding M.D. Hayward, N.O. Bosemark, T. Romagosa, 2012-12-06 Our requirement for

plant breeders to be successful has never been greater. However, one views the forecasted numbers for future population growth we will need in the immediate future to be feeding, clothing and housing many more people than we do inadequately at present. Plant breeding represents the most valuable strategy in increasing our productivity in a way that is sustainable and environmentally sensitive. Plant breeding can rightly be considered as one of the oldest multidisciplinary subjects that is known to humans. It was practised by people who first started to carry out a settled form of agriculture. The art, as it must have been at that stage, was applied without any formal underlying framework but achieved dramatic results, as witnessed by the forms of cultivated plants we have today. We are now learning how to apply successfully the results of yet imperfect scientific knowledge. This knowledge is, however, rapidly developing, particularly in areas of tissue culture, biotechnology and molecular biology. Plant breeding's inherent multifaceted nature means that, alongside obvious subject areas like genetics, we also need to consider areas such as statistics, physiology, plant pathology, entomology, biochemistry, weed science, quality seed characteristics, reproductive biology, trial design, selection and computing. It therefore seems apparent that modern plant breeders need to have a grasp of a wide range of scientific knowledge and expertise if they are successfully to exploit the techniques, protocols and strategies which are open to them.

PLANT BREEDING IN 21ST CENTURY B.D. Singh, N.S. Shekhawat, 2019-05-01

The discipline of plant breeding has undergone transformation due to the assimilation of the rapid developments in molecular biology. The existing books on plant breeding deal mainly with the classical approaches while specialized books on molecular approaches usually lack discussion of the classical methods. The book *Plant Breeding for 21st Century* attempts to present the complete picture of plant breeding ranging from the classical to the molecular approaches applied to crop improvement. The book is divided into four sections: Classical Plant Breeding, Transgenic technology, Molecular Markers and Miscellaneous. The first section deals with the classical plant breeding and is divided into eight chapters. The second section has four chapters and describes transgenic technology. The third section discusses various aspects of molecular markers and is spread over three chapters. The final section has a single chapter dealing with variety release, seed multiplication and intellectual property rights. This book is designed primarily for graduate students viz B.Sc. agriculture and B.Sc. science students with botany as one of the subjects who would get their first exposure to plant breeding. It would also be useful for the post graduate students especially in botany and to teachers of the subject. The book is written in simple and easy to understand language. Illustrations and photographs have been provided wherever they were expected to facilitate comprehension of the subject under discussion.
