Government Reports Announcements & Index, 1979-11 *Overcoming Barriers to Deployment of Plug-in Electric Vehicles* National Research Council, Transportation Research Board, Division on Engineering and Physical Sciences, Board on Energy and Environmental Systems, Committee on Overcoming Barriers to Electric-Vehicle Deployment, 2015-06-26 In the past few years interest in plug in electric vehicles PEVs has grown Advances in battery and other technologies new federal standards for carbon dioxide emissions and fuel economy state zero emission vehicle requirements and the current administration s goal of putting millions of alternative fuel vehicles on the road have all highlighted PEVs as a transportation alternative Consumers are also beginning to recognize the advantages of PEVs over conventional vehicles such as lower operating costs smoother operation and better acceleration the ability to fuel up at home and zero tailpipe emissions when the vehicle operates solely on its battery There are however barriers to PEV deployment including the vehicle cost the short all electric driving range the long battery charging time uncertainties about battery life the few choices of vehicle models and the need for a charging infrastructure to support PEVs What should industry do to improve the performance of PEVs and make them more attractive to consumers At the request of Congress *Overcoming Barriers to Deployment of Plug in Electric Vehicles* identifies barriers to the introduction of electric vehicles and recommends ways to mitigate these barriers This report examines the characteristics and capabilities of electric vehicle technologies such as cost performance range safety and durability and assesses how these factors might create barriers to widespread deployment *Overcoming Barriers to Deployment of Plug in Electric Vehicles* provides an overview of the current status of PEVs and makes recommendations to spur the industry and increase the attractiveness of this promising technology for consumers Through consideration of consumer behaviors tax incentives business models incentive programs and infrastructure needs this book studies the state of the industry and makes recommendations to further its development and acceptance

History of the Electric Automobile Ernest Henry Wakefield, 1993-08-01 *History of the Electric Automobile* covers the evolution from the first electric vehicles of the 1880s to the advances of today Beginning with early electric vehicle development in England France and the United States this book provides an in depth look at the so called golden age of electric vehicles 1895 1905 demonstrating the technological improvements and business risks of this era This history also explores the dead period of the 1930s 1940s and 1950s and the subsequent re birth of interest in electric vehicles in the early 1960s Events which have impacted the development of electric cars since then most notably the Electric Vehicle Act of 1976 are also examined The book also features an appendix section containing such information as a name table of American electric cars the Electric Vehicle Act of 1976 nostalgia and more A glossary and index are also included For more than a century nearly all seers who have predicted the role of electric vehicles in personal transportation have been wrong This book records what actually happened both within America and internationally Ernest H Wakefield

Electric and Hybrid Vehicles Gianfranco

Pistoia,2010-07-27 *Electric and Hybrid Vehicles Power Sources Models Sustainability Infrastructure and the Market* reviews the performance cost safety and sustainability of battery systems for hybrid electric vehicles HEVs and electric vehicles EVs including nickel metal hydride batteries and Li ion batteries Throughout this book especially in the first chapters alternative vehicles with different power trains are compared in terms of lifetime cost fuel consumption and environmental impact The emissions of greenhouse gases are particularly dealt with The improvement of the battery or fuel cell performance and governmental incentives will play a fundamental role in determining how far and how substantial alternative vehicles will penetrate into the market An adequate recharging infrastructure is of paramount importance for the diffusion of vehicles powered by batteries and fuel cells as it may contribute to overcome the so called range anxiety Thus proposed battery charging techniques are summarized and hydrogen refueling stations are described The final chapter reviews the state of the art of the current models of hybrid and electric vehicles along with the powertrain solutions adopted by the major automakers Contributions from the worlds leading industry and research experts Executive summaries of specific case studies Information on basic research and application approaches [Electric Vehicle Business Models](#) David Beeton,Gereon Meyer,2014-12-27 This contributed volume collects insights from industry professionals policy makers and researchers on new and profitable business models in the field of electric vehicles EV for the mass market This book includes approaches that address the optimization of total cost of ownership Moreover it presents alternative models of ownership financing and leasing The editors present state of the art insights from international experts including real world case studies The volume has been edited in the framework of the International Energy Agency s Implementing Agreement for Cooperation on Hybrid and Electric Vehicles IA HEV The target audience primarily comprises practitioners and decision makers but the book may also be beneficial for research experts and graduate students *Electric Vehicles in the USA. Economic Benefits and Environmental Impact* Joeleen Kimbell,2024-11-13 Case Study from the year 2023 in the subject Business economics Market research grade A language English abstract This study aims to conduct an empirical review of the economic and environmental implications of electric vehicles in the US to depict a balanced view of the outcome of the technology As EV demand grows due to technological progress and consequent emphasis on climate change solutions the role of these vehicles in recasting parts of the American economy and environment has to be discussed This paper aims to determine the amount of money that can be saved through the use of EVs by comparing the fuel costs of EVs to conventional ICE vehicles These savings can lead to more disposable income so households can spend money on other aspects of the economy The paper focuses on how the change from a reliance on gasoline to electricity can decrease the countries reliance on oil importation This shift has profound geo political consequences and can act as a force for improving national energy security and economic resilience In particular the study aims to establish new employment opportunities created by the EV value network extending from manufacturing to transport infrastructure development This includes manufacturing of batteries assembling

cars maintenance of cars and even setting up charging stations and their maintenance The study also concerns the environmental impact of the extensive use of EVs Thus by comparing emissions data in the study the study seeks to illustrate that EVs produce fewer CO₂ and other greenhouse gas emissions than ICE vehicles This reduction is essential to achieve national and international climate targets and goals Exploring the effects of EVs on air quality the paper focuses on the effect on NO_x emissions and PM emissions This is a crucial benefit because high atmospheric pollution levels are detrimental to human health especially in crowded regions The Global Rise of the Modern Plug-In Electric Vehicle John D. Graham,2021-04-30 We may be standing on the precipice of a revolution in propulsion not seen since the internal combustion engine replaced the horse and buggy The anticipated proliferation of electric cars will influence the daily lives of motorists the economies of different countries and regions urban air quality and global climate change If you want to understand how quickly the transition is likely to occur and the factors that will influence the predictions of the pace of the transition this book will be an illuminating read **EVs Coming to Market** Electric Vehicle Association of the Americas,1997 **Electric Vehicles: Limited Range and High Costs Hamper Commercialization. Report by the Comptroller General of the United States** United States. General Accounting Office,1982 **Tesla Motors, Inc** Alan N. Hoffman,2011 Tesla Motors Inc is in the business of developing manufacturing and selling technology for high performance electric automobiles and power train components Hoping to develop a greater worldwide acceptance of electric vehicles as an alternative to the traditional internal combustion petroleum based vehicles that dominate the market Tesla is the first company that commercially produced a federally compliant electric vehicle with the design styling and performance characteristics of a high end performance automobile Tesla currently offers one vehicle the Roadster for sale as well as supplying electric power train components to Daimler for use in its Smart EV automobile Additionally Tesla has a partnership with Toyota Motors to develop and supply an electric power train for Toyota's Rav4 SUV **Electric Vehicles For All** Maryanne Kane,Edward Kane,2020-02-15 The future of driving is clearly electric GM Ford BMW Hyundai and virtually all global automakers are pouring billions of dollars into the development of electric vehicles EVs for use this decade My latest book **Electric Vehicles for All** profiles the newest EVs coming out in 2020 and the hottest concept EVs that will roll out throughout the decade The investment infusion is designed to create EVs priced right for global masses by bringing down the price of electric batteries electric components and smart autonomous technology There's also a big innovation push to get far greater range for the EVs on a single charge Hyundai alone is investing 87 billion to create a lineup of quickly produced EV models from sedans to SUVs and trucks They've partnered with US startup Canoo to design a common platform a skateboard like frame to facilitate speedy easy and inexpensive EV production The government of India wants 200 million EVs on its roads this decade India's giant conglomerate Tata Group supports the goal Tata is creating what it calls an ecosystem of charging stations around India battery production and even an inexpensive EV SUV priced at 19 000 Some of the unique and very exciting EV models

that we showcase in the book include Hyundai's hybrid electric and solar powered EV Sonata. We profile Mercedes' spectacular concept EV Vision AVTR that's all electric, all autonomous, and straight out of the Avatar movie. Tesla is the global leader of EVs and they are about to launch their Model Y, a small SUV that CEO Elon Musk believes may be their most popular model ever. Tesla is also putting finishing touches on its Cybertruck, a stainless steel EV pickup that is one of Musk's favorite projects. GM is resurrecting the Hummer as an electric pickup. Ford is reinventing the Mustang as an electric SUV. Porsche is forecasting record 2020 sales in the US led by its electric SUV, the Taycan. Kia, BMW, Subaru, Nissan, VW, Toyota, and many other global automakers are all rolling out new EVs throughout this decade. Kia will unveil 11 new EVs by 2025. Subaru expects to be selling only EVs by 2030. There is much more to the EV story beyond cars. Electric bikes are forecasted to be immensely popular during the 2020s, particularly in Asia. We profile a number of them, including Jeep's powerful new electric mountain bike and the Twike, which is a 3-wheeled electric scooter. Flying taxis are a big part of the future transportation mix, with Larry Page, Boeing's Wisk Aero, Germany's Volocopter, Hyundai's S-A1, and Joby Aviation flying electric taxis all leading the way. Also in the book, we profile a new form of urban transportation, the electric URBY. Also the dawn of all-electric commercial air travel. And a fun new electric sports vehicle, the Bobsled, from Austria. The future of transportation is electric, with zero emissions, that's green and clean. The 2020s are the decade of electric vehicle transportation. A big green push to go electric is underway as governments tighten their emissions standards to clean the air and consumers choose electric vehicles for their zero carbon emissions. I hope you enjoy taking a look and getting details on the latest EVs and exciting concept EVs as much as I enjoyed researching and writing the book. Thanks and best,
Edward Kane

Definition and Market Analysis of the Tesla Motors Model S Erik Somssich, 2017-04-04 Seminar paper from the year 2016 in the subject Business economics, Offline Marketing and Online Marketing, grade 1-3, University of applied sciences Cologne, course Marketing, language English, abstract. The purpose of this document is to analyse the strategic marketing positioning of Tesla Motors with the focus on its premium electric car Model S. From the text: The Company Tesla Motors Business Analysis Market Analysis Market Positioning and Strategy *Electric Vehicles and Rose Colored Glasses* Mark A. Ashford, 2021-02-16. This book is about Electrically Powered Vehicles (EVs). So many comparisons on YouTube, so many stories about their advantages, and in the media, articles comparing them to internal combustion engine powered vehicles. Uniformly, gasoline powered vehicles, gas guzzlers, are cast as polluters and bad. The environment moving people off gas powered vehicles and into EVs is something for politicians and interested parties to set goals around for when we will remove them from our lives, our existence. EVs are to be welcomed, their purchase cost is subsidized from taxation. The proud new EV owner drives away in their new vehicle to do what, plug in and drive. There are consequences to driving off a dealer's lot in a new EV. Consequences many reviewers do not take into account, knowingly or not. There are gross errors in comparison of EVs and gasoline powered vehicles, which the current low level of adoption of EVs does not

mention This is not an attempt to set straight the comparisons that would take far to long But just as the internal combustion engine changed the world EVs will do so as well I need to set some boundaries to this book I do not own an EV and do not see one in my future I do not have solar power I am not an electrician I am not a mechanic or a scientist Most of the videos and comments made on EVs and home solar power installations are heavy on the cost benefit ratios leveraging government subsidies and claiming rebates and rebate processes EVs travel and home solar installations is not a plug and play scenario I do not promote or denigrate any particular manufacturer because I have no first hand experience to draw from But it is safe to say Tesla will come up a lot as they are the poster boy girl for EV cars I live in Ontario Canada Most of my examples and comments are relative to my home Province and country because that is my experience Refence to comments and information from other jurisdictions of course will be made However the principals discussed here and the examples shown can be a basis for you the reader to perform the same analysis in your own jurisdiction The Province of Ontario covers 1 076 million km2 has a population of 14 57 million It borders four of the five Great Lakes of North America Lake Superior Lake Huron Lake Erie and Lake Ontario in the south It stretches all the way up to Hudson s Bay in the North This book is about taking off the rose colored glasses many people are wearing and looking at the consequence of widespread EV adoption Above all it is about evening out the comparisons many commentators are making and the practical implications for all of us

Battery Electric Vehicle Production Projections John Shamus Cunningham, Massachusetts Institute of Technology. Department of Mechanical Engineering, 2009 In mid 2008 and early 2009 Deutsche Bank and The Boston Consulting Group each released separate reports detailing projected Battery Electric Vehicle production through 2020 These reports both outlined scenarios in which BEVs gained significant market share 1 2% by the end of the decade To analyze the magnitude of the annual growth rates needed to obtain these sales figures similar case studies were identified and evaluated The transition from gasoline to diesel power in France between 1970 and 2005 11% average annual growth as well as the introduction of Hybrid Gasoline Electric vehicles to the US 46% average annual growth were selected as relevant points of comparison Through a review of all major automotive manufacturers as well as BEV focused startups press releases best case and worst case estimates for total BEV production in 2010 and 2011 were obtained Using these figures it was determined that in a best case near term production scenario annual production rates would need to average 35 to 40% annual growth over the next 10 years and in a worst case near term production scenario would need to average in excess of 45% annual growth to reach production estimates

Unveiling the Magic of Words: A Review of "**Vehicles Comparison For Startups 6 508 Electric Vehicles Examples USA**"

In a global defined by information and interconnectivity, the enchanting power of words has acquired unparalleled significance. Their power to kindle emotions, provoke contemplation, and ignite transformative change is actually awe-inspiring. Enter the realm of "**Vehicles Comparison For Startups 6 508 Electric Vehicles Examples USA**," a mesmerizing literary masterpiece penned with a distinguished author, guiding readers on a profound journey to unravel the secrets and potential hidden within every word.
