Bootstrap for Panel Data Models with an Application to the Evaluation of Public Policies Bertrand G. B. Hounkannounon, 2011 *The Econometrics of Multi-dimensional Panels* Laszlo Matyas, 2017-07-26 This book presents the econometric foundations and applications of multi dimensional panels including modern methods of big data analysis The last two decades or so the use of panel data has become a standard in many areas of economic analysis The available models formulations became more complex the estimation and hypothesis testing methods more sophisticated The interaction between economics and econometrics resulted in a huge publication output deepening and widening immensely our knowledge and understanding in both The traditional panel data by nature are two dimensional Lately however as part of the big data revolution there has been a rapid emergence of three four and even higher dimensional panel data sets These have started to be used to study the flow of goods capital and services but also some other economic phenomena that can be better understood in higher dimensions Oddly applications rushed ahead of theory in this field This book is aimed at filling this widening gap The first theoretical part of the volume is providing the econometric foundations to deal with these new high dimensional panel data sets It not only synthesizes our current knowledge but mostly presents new research results The second empirical part of the book provides insight into the most relevant applications in this area These chapters are a mixture of surveys and new results always focusing on the econometric problems and feasible solutions *Festschrift in Honor of Peter Schmidt* Robin C. Sickles, William C. Horrace, 2014-03-15 From the Introduction This volume is dedicated to the remarkable career of Professor Peter Schmidt and the role he has played in mentoring us his PhD students Peter s accomplishments are legendary among his students and the profession Each of the papers in this Festschrift is a research work executed by a former PhD student of Peter s from his days at the University of North Carolina at Chapel Hill to his time at Michigan State University Most of the papers were presented at The Conference in Honor of Peter Schmidt June 30 July 2 2011 The conference was largely attended by his former students and one current student who traveled from as far as Europe and Asia to honor Peter This was a conference to celebrate Peter s contribution to our contributions By our contributions we mean the research papers that make up this Festschrift and the countless other publications by his students represented and not represented in this volume Peter s students may have their families to thank for much that is positive in their lives However if we think about it our professional lives would not be the same without the lessons and the approaches to decision making that we learned from Peter We spent our days together at Peter s conference and the months since reminded of these aspects of our personalities and life goals that were enhanced fostered and nurtured by the very singular experiences we have had as Peter s students We recognized in 2011 that it was unlikely we would all be together again to celebrate such a wonderful moment in ours and Peter s lives and pledged then to take full advantage of it We did then and we are now in the form of this volume Estimation and Testing in Dynamic, Nonlinear Panel Data Models Margaret Susan

Sustainable economic growth is important due to its implications for the ecosystem natural resources and human development Public health is also a key factor in developing a sustainable economy and it is a national asset because of its impact on labor supply and productivity Health conditions depend on various factors such as environmental hazards availability of public facilities economic conditions pandemics etc Green energy has an association with health as it guarantees a clean environment Such measures are necessary to improve the public's mental and physical health leading to sustainable economic growth Hence green energy governance and health are the potential avenues to enhance public health promoting sustainable economic growth Good health guarantees higher economic growth as when more people are healthy and suitable to work the labor supply will increase and the economy grows Likewise when health improvements are made the productivity of people improves because healthy people prove to be more active both physically and mentally When overall productivity improves the economy would also benefit However some factors affect public health including environmental degradation process Green energy helps to improve overall health by the reduction in emission of dangerous gasses Preservation of balance in terms of atmospheric gasses becomes possible through green energy and a clean environment resulting in fewer diseases and deaths making the economy grow by providing healthier people with higher productivity Previous studies tried to investigate the channel through which public health can affect economic growth and added environmental pollution as a health problem However the literature sheds light on the importance of a clean environment for the economy by checking its impact on public health Although there is a lack of investigation into how governance and green energy can influence public health which lead to increase the economic growth calling scholars to add this beneficial factor in future research This Research Topic focuses on sustainable economic growth through public health and green energy to add valuable information to the current knowledge in green energy environment public health as well as sustainable economic growth The main focus of research for this topic is emerging economies as these are the most vulnerable in terms of health and energy issues and economic growth sustainability It is assumed that the use of nonrenewable energy has a high environmental impact on health Hence there should be some practical solution to improve health without interrupting the energy supply As a result scholars must hypothesize and test new solutions and this Research Topic is an attempt to do so Topics covered by us would be governance green energy environment and sustainable economic growth This Research Topic provides an avenue for discussion as well as practical research on areas related to green energy public health sustainable environment sustainable economic growth and energy related issues of developed and developing economies
