Building a High-Tech Alarm System with Raspberry Pi (Second Edition) WILLIAM. PRETTY, 2024-11-08 Details: This book discusses the basic components of any alarm system. All alarm systems have two basic functions. First, they monitor their environment, looking for a change such as a door or window opening or someone moving about in the room. Second, they alert the legal owner or user to this change. The system described in this book uses a scanning-type software to detect intruders. It behaves like a guard dog pacing up and down the fence line, on the lookout for either an intruder or a familiar person. If you have an alarm key, you can disarm the system and enter. With the scanning method, the software is easy to write and explain. It can scan eight alarm zones plus two special fire zones in about one second. You don't have to be an electrical engineer to install an alarm system; just a decent carpenter, painter, and plasterer. Because this alarm system runs on 12 volts, you don't have to be a licensed electrician either to install it. The alarm system presented here uses Python software on the Raspberry Pi combined with some elementary electronic circuits. The code described in the book, as well as CAD files and a bill of materials for the alarm panel, are available for free downloading. The book provides the reader with examples of typical configurations coming straight from the author's experience. After reviewing the hardware

components typically used in common alarm systems the author shows how to plan one yourself To implement a modular alarm no matter if it is for a single house or for a business or restaurant the book shows how to skillfully combine a Raspberry Pi with small auxiliary electronic circuits These are not installation instructions but food for thought that will enable readers to find a solution to their needs [The Internet of Things: Do-It-Yourself at Home Projects for Arduino, Raspberry Pi and BeagleBone Black](#) Donald Norris,2015-01-30 Build and program projects that tap into the Internet of Things IoT using Arduino Raspberry Pi and BeagleBone Black This innovative guide gets you started right away working with the most popular processing platforms wireless communication technologies the Cloud and a variety of sensors You ll learn how to take advantage of the utility and versatility of the IoT and connect devices and systems to the Internet using sensors Each project features a list of the tools and components how to explanations with photos and illustrations and complete programming code All projects can be modified and expanded so you can build on your skills The Internet of Things DIY Projects with Arduino Raspberry Pi and BeagleBone Black Covers the basics of Java C Python JavaScript and other programming languages used in the projects Shows you how to use IBM s Net Beans IDE and the Eclipse IDE Explains how to set up small scale networks to connect the projects to the Internet Includes essential tips for setting up and using a MySQL database The fun DIY projects in the book include Raspberry Pi home temperature measurements Raspberry Pi surveillance webcams Raspberry Pi home weather station Arduino garage door controller Arduino irrigation controller Arduino outdoor lighting controller Beaglebone message panel Beaglebone remote control SDR Machine to machine demonstration project **Building a High-Tech Alarm System with Raspberry Pi** William Pretty,2023-04-03 **Sensor Projects with Raspberry Pi** Guillermo Guillen,2024-08-10 Use Python to develop Rasperry Pi projects to solve common digital image processing and IoT problems Using a free IoT server you ll tackle fundamental topics and concepts behind theses two areas This second edition includes new content on Artificial Intelligence and updated sensor guidance to help you better explore virtual animations create a homemade spectrometer and master object classification with Edge Impulse Start by creating a system to detect movement with a PIR motion sensor and a Raspberry Pi board Use the MQ2 gas sensor and a Raspberry Pi board as a gas leak alarm system to detect dangerous explosive and fire hazards Then train your system to send the captured data to the remote server ThingSpeak You ll also develop a weather station with your Raspberry Pi Using the DHT11 humidity and temperature sensor and BMP barometric pressure and temperature sensor in conjunction with ThingSpeak and X you can receive real time weather alerts from your own meteorological system Spectral sensors used with the Raspberry Pi include the AS7262 six colors and AS7263 near infrared for the construction of a filter spectrometer sensing colored solutions and assessing plant foliage health Finally expand your skills into the popular machine learning world of digital image processing using OpenCV and a Pi Make your own object classifiers and finally manipulate an object by means of an image in movement This skillset has many applications ranging from recognizing people or objects to creating your own
