Electric Vehicles Case Study For Startups 28 921 Electric Vehicles:

Applied Mechanics Reviews, 1994 **Business Periodicals Index**, 1979 Effectiveness of Electric Vehicles Vs. Vehicle Technologies Konstantinos Sgoutas, 1995 **Electric Vehicle Business Models** David Beeton, Gereon Meyer, 2014-12-27 This contributed volume collects insights from industry professionals policy makers and researchers on new and profitable business models in the field of electric vehicles EV for the mass market This book includes approaches that address the optimization of total cost of ownership Moreover it presents alternative models of ownership financing and leasing The editors present state of the art insights from international experts including real world case studies The volume has been edited in the framework of the International Energy Agency s Implementing Agreement for Cooperation on Hybrid and Electric Vehicles IA HEV The target audience primarily comprises practitioners and decision makers but the book may also be beneficial for research experts and graduate students **Plug-In Electric Vehicles** Sydney Vergis, Thomas S. Turrentine, Lewis Fulton, Elizabeth Fulton, University of California, Davis. Institute of Transportation Studies, 2014 **An Electric Vehicle Conversion Start-Up. Development of a Business Model Approach** Fabian Hoeft, 2019-10-24 Master s Thesis from the year 2019 in the subject Business economics Business Management Corporate Governance grade 1 3 Niederrhein University of Applied Sciences Krefeld School of Business and Economics language English abstract Today s world of mobility is characterised by a high degree of dynamism and change is becoming apparent Currently around 45 million passenger cars with conventional combustion engines powered by diesel or petrol are registered in Germany The share of electric vehicles is still well below one per cent Nevertheless the voices for sustainable and environmentally friendly transport are becoming louder One political measure in this respect is the implementation of driving bans in major German cities for some conventional combustion cars Car electrification is a solution for converting cars with conventional combustion engines to electric drives In the context of this thesis car electrification is regarded as a transition solution towards a nationwide electrified transport network of new electric cars A comprehensive concept of a business model approach from a start up perspective has been developed based on the analysis of the environment industry and customer needs Analysing the structure of the electrical conversion industry revealed that the subject of car electrification is hardly widespread and that current suppliers have only converted a smaller number of cars Besides the small scale of implementation the operational execution by existing suppliers can be considered weak in terms of competitiveness and sustainability The analysis of the needs of potential customers of car electrification using qualitative and quantitative methods has led to incredibly valuable insights for the development of the business model approach A high openness to purchase was expressed considering some of the factors mentioned such as a test drive with an electrified car before purchase and a durability guarantee of the conversion The high relevance of initial acquisition costs compared to operating expenses in the purchase decision for passenger cars is another precious insight The business model approach developed

based on the findings obtained differs fundamentally from the strategies of today's providers. By incorporating the existing infrastructure of workshops and service points proximate to the end customer and scalability of the business operation can be achieved. Partnering with universities and industry are two critical elements in the development of a sustainable, secure, and user-friendly technical solution.

Byton Priscilla Liang, 2022. This case study presents students with the difficult entrepreneurial journey of Byton, a Chinese electric vehicle startup with global ambitions. Byton was once considered a superstar Chinese electric vehicle startup. In early 2018, the company embarked on a B round of financing to raise funds to continue with the design and development of its luxury electric vehicles. After assessing Byton's competitive environment and business strategies, students will advise a private equity firm whether or not to invest in Byton. Students will also analyze key elements that led to Byton's success, failure, and lessons learned in managing a technology startup with global ambitions.

A Conceptual Framework for Business Model Innovation Luning Shao, 2014. EVs (electric vehicles) as sustainable technologies hold the potential to achieve the sustainability of the transport system and challenge the prevailing business models of internal combustion engines (ICEs). To unlock the dominant logic of ICEs and promote the diffusion of EVs, business model (BM) innovation is necessary. However, BM innovation for EVs still faces many obstacles. This paper makes contribution theoretically and practically by constructing a 3-7 system and proposing a two-phase conceptual framework for BM innovation of EVs. The case of Shenzhen City, China, is studied to illustrate how the 3-7 system and two-phase conceptual framework is applied. Based on the case study, this paper concludes two new barriers that are not highlighted by the previous literature and makes a number of suggestions to help address the issues found in BM innovation.

The Global Rise of the Modern Plug-In Electric Vehicle John D. Graham, 2021-04-30. We may be standing on the precipice of a revolution in propulsion not seen since the internal combustion engine replaced the horse and buggy. The anticipated proliferation of electric cars will influence the daily lives of motorists, the economies of different countries and regions, urban air quality, and global climate change. If you want to understand how quickly the transition is likely to occur and the factors that will influence the predictions of the pace of the transition, this book will be an illuminating read.

Competing Business Models For Electric Vehicles Jasper von Heyden, Rolf Wüstenhagen, 2011. Climate change, peak oil, and energy dependence have put significant pressure on the current transportation regime. Because of increasing range and efficiency advantages, the electric vehicle (EV) has emerged as a viable strategy for addressing these problems. Three case studies were conducted in this research to analyze the status quo of competing business models in the electric vehicle industry and to determine whether and how these business models enable the firms to be successful. Three frameworks will be employed to explore the main critical issues around the business models of the EV enterprises, and 14 qualitative interviews with selected experts from various backgrounds will support the findings.

Tesla Motors, Inc Alan N. Hoffman, 2011. Tesla Motors, Inc. is in the business of developing, manufacturing, and selling technology for high-performance electric automobiles and power train components.

Hoping to develop a greater worldwide acceptance of electric vehicles as an alternative to the traditional internal combustion petroleum based vehicles that dominate the market Tesla is the first company that commercially produced a federally compliant electric vehicle with the design styling and performance characteristics of a high end performance automobile Tesla currently offers one vehicle the Roadster for sale as well as supplying electric power train components to Daimler for use in its Smart EV automobile Additionally Tesla has a partnership with Toyota Motors to develop and supply an electric power train for Toyota s Rav4 SUV

A Case for Electric Vehicles in America Jonathan Roth,2010 Electric vehicles are crucial for America s energy future and their mass adoption could be one path towards a more secure clean energy future When researching further into the topic the idea of consumer acceptance of the EV may be the most important factor for EV success in America It is easy to understand the first hand advantages of the electric car with their high efficiency zero localized emissions and petroleum free operations however even though these vehicles make a lot of sense on paper it is still a mystery to why American consumers do not accept them into the automobile culture With EVs now about to be re introduced into the American marketplace a consumer perception analysis could be very telling about future acceptance of the vehicles The study attempts to measure how consumer perceptions and expectations influence the vehicle a consumer will ultimately purchase then attempt to gauge EV acceptance through a blend of consumer perceptions current in market trends and social norm theory To obtain accurate consumer perceptions of EV technology a nationwide consumer survey was conducted along with several dealer interviews and vehicle test drives Once all of the surveys and responses were collected a framework to measure consumer market perceptions was developed and analyzed allowing recommendations to aid EV acceptance in the American market to be made

Tesla, Inc. and the world's transition to electric vehicles. Risks, strenghts, opportunities and strategic reccommendations Sebastian Neumann,2020-08-27 Academic Paper from the year 2019 in the subject Business economics Business Management Corporate Governance grade 2 2 Technical University of Applied Sciences Mittelhessen language English abstract This compulsory paper covers the most relevant aspects of strategies and strategizing at Tesla Inc with a focus on supply chain management manufacturing services and technology It supports to identify industrial drivers and leverage strategic opportunities effectively The reader will learn how to formulate synchronize manage and control corporate strategy with regards to business models goal orientation environmental fit and stakeholders requirements The reader will learn how to apply state of the art innovation frameworks and techniques The electric vehicle market has captured worldwide consumer interest This market segment was according to Kumar valued at 118 864 5million in 2017 and is expected to reach 567 299 8million by 2025 growing at a compound annual growth rate CAGR of 22 3% Further claims that this rising interest rate is believed to be achieved because of an outperformance in regard to the conventional vehicle since it provided higher fuel economy low carbon emission and maintenance convenience of charging at home smoother drive and reduced sound from engine This market segment is still in its growing phase since it

must convince people that it will work and is practical Therefore the market for all electric vehicles is globally small at roughly 1% of total sales but Tesla has been doing its part to double it In late December 2018 Business Insider 2018 stated that Tesla Inc has created a micro monopoly Nowadays according to DeBord one of the biggest challenges of Tesla is to maintain the electric vehicle EV market they have created [The Business of Electric Vehicles](#) Jonas Boehm,Hemant K. Bhargava,Geoffrey G. Parker,2020-12-14 This monograph develops platform thinking with an illustrative focus on the battery electric vehicle segment of the automobile industry It traces the development of the industry identifies key decisions by various participants and analyzes these decisions from a platform strategy lens **Future Drive** Daniel Sperling,2013-02-22 In Future Drive Daniel Sperling addresses the adverse energy and environmental consequences of increased travel and analyzes current initiatives to suggest strategies for creating a more environmentally benign system of transportation Groundbreaking proposals are constructed around the idea of electric propulsion as the key to a sustainable transportation and energy system Other essential elements include the ideas that improving technology holds more promise than large scale behavior modification technology initiatives must be matched with regulatory and policy initiatives government intervention should be flexible and incentive based but should also embrace selective technology forcing measures more diversity and experimentation is needed with regard to vehicles and energy technologies Sperling evaluates past and current attempts to influence drivers and vehicle use and articulates a clear and compelling vision of the future He formulates a coherent and specific set of principles strategies and policies for redirecting the United States and other countries onto a new sustainable pathway **The Electric Vehicle Revolution** Kevin A. Wilson,2023-11-07 Explore the fascinating evolving world of electric vehicles from the first EVs in the Victorian era to their rapid expansion today and beyond In The Electric Vehicle Revolution automotive journalist Kevin Wilson provides a thorough engaging overview of where EV technology is today how it got there and where it s going Since the turn of the twenty first century EVs have gone from wonky who cares vehicles like GM s EV1 and early Teslas to every manufacturer s must have future Electric propulsion preceded fossil fuel cars by decades and even vied for prominence in the early twentieth century auto industry against both steam power and internal combustion engines From Electrobat an early New York taxi fleet through Columbia which had built 1 000 electric cars before either Henry Ford or Ransom Olds had built a single gasoline car viable business start ups in the early auto age were as competitive and innovative as those in early twenty first century Silicon Valley But it was not to be for electric cars in the early days of the 1900s as the auto industry evolved to favor gasoline cars thanks in part to the influence of the oil industry and the build out of infrastructure to supply fuel across the country Gas powered cars may have won the day but post WWII experiments with electric cars continued both within the established auto industry and from outside firms and visionaries including cars developed by General Electric Sears and the Henney Kilowatt alongside Ford and GM experimentals Rapidly evolving electronic technology beginning in the 1960s along with growing concerns about emissions and pollution set the stage for

renewed interest in electric cars Improved batteries for cellphones laptops electronic controls computing and beyond provided the impetus for a wave of more sophisticated and feasible electric vehicles including GM s EV1 and the first Teslas Elon Musk s Tesla Motors proves the auto industry disruptor and sets the stage for responses by the mainstream auto industry including Nissan s Leaf Chevrolet s Bolt and a host of high end EVs from company s like Audi Jaguar and the like Rival start ups step in as well and government incentives subsidies and regulatory demands all drive unprecedented development Today the rush to electrify has nations and companies competing to see who can declare the earliest end to internal combustion engines but this radical transition won t be as easy as throwing a switch The Electric Vehicle Revolution thoroughly explores the challenges of infrastructure battery and vehicle tech and the cost to consumers as well as the long phase in as EVs are set to replace existing gas cars over decades Whether you embrace EVs or have gasoline in your veins The Electric Vehicle Revolution provides a fascinating engaging and stunningly illustrated overview of where the car world is today and where it s headed for the future Electric Vehicles Dolly Thankachan,S Sangeetha,Shweta B Thomas,2026-06-19 The book explores ongoing research and development in the electric vehicle industry covering advancements in battery technology autonomous driving and vehicle to grid V2G integration It discusses topics such as solid state batteries wireless charging advanced driver assistance systems and the life cycle assessment of EVs **Jolt!** James Billmaier,2010 The author explains why he believes the electric vehicle is going to rise to the top of the personal automobile market discusses the benefits of electric cars and considers the possible role of the electric vehicle in the transformation of the United States from an oil based to an electric powered economy *Global Strategies of Electric Vehicles: Us* Pramod Singh,2018-08-16 The quest for energy independence and rising environmental concerns are key drivers in the growing popularity of electric vehicles or EVs electric and plug in hybrid cars Studies indicate that for 90% of the Americans who use their cars to get to work every day the daily commute distance is less than 50 km or 30 mi and on the average the commuter car remains parked about 22 h per day The EVs have in common the batteries which provide storage capability that can be effectively harnessed when the vehicles are integrated into the grid The entire concept of using the EVs as a distributed energy resource load and resource is known as the vehicle to grid or V2G concept Though I have more than two decades of rendezvous with energy and diversified energy sources to quench the thirst of humanity my specific interest in electric vehicle started in 2014 when I joined Black Veatch and got associated with prestigious project of Tesla as strategist and adopt the success model of US market for Asia Tesla Motors manufactures the Tesla Model S the all electric car that won the Motor Trend 2013 Car of the Year award While developing the car Tesla launched a program to aggressively deploy high power fast charging stations Superchargers along major travel corridors throughout the United States Tesla awarded Black Veatch a contract to design and construct pilot sites in the Supercharger network The Tesla Supercharger U S build out is the largest project to date for the Black Veatch team Services include engineering site assessment and permitting and construction services for Tesla s

charging stations It s one thing to build one Supercharger site but it s a totally different thing to build 100 at a time or have 40 or 50 in construction at any given time Black Veatch brought an ability to be able to expand rapidly bring on the resources necessary and also manage the construction of a complex project like that all concurrently Kevin Kassekert Director Supercharger Deployment and Energy Efficiency Tesla Motors Inc It was my absolute privilege to be part of the team of Black Veatch who is now a market leader in the design construction and integration of complex electric vehicle EV and hydrogen fuel cell vehicle FCV infrastructure My journey started with a Big Bang when B V Chairman Steve Edward pioneered the Chairman s Challenge for new and fresh ideas from offices across the global with the help of an online contest Absolute delight was my feeling when my first idea on a strategic model of business capture I call it Shark Strategy won the most voted idea of the challenge out of hundreds of ideas submitted by most of the top brains of the 10000 odd employees of the 100 year old firm It was just the beginning as in the next Chairman s Challenge I collaborated with others in Kansas HQ to put forth another idea on use of Drone for Industrial Application and Project Management Monitoring of complex nature like EPC work of intercontinental pipelines or Electric Transmission Lines across the mountains or dense forest like Amazon basin To my absolute surprise our team won the top award of the chairman s challenge and each team members were gifted a real Drone costing not less than 15000 INR at that time but unfortunately it could not be shipped to Mumbai for me as Drones for private applications were banned by government of India My all other team members sent me pictures of drones awarded to them Great Memories of Kansas City Baseball match cheering Royals after intensive strategy meetings on future of the company and American Supercharger Infrastructures Read Tesla Volta and other projects This book is my attempt to help generation next understand and support clean vehicle adoption advance clean transportation and sustainability
