Somasekhar, Experimental Studies of Interactive Decisions Amnon Rapoport, 2012-12-06 This book is about the interplay of theory and experimentation on group decision making in economics The theories that the book subjects to experimental testing mostly come from the theory of games The decisions investigated in the book mostly concern economic interaction like strict competition two person bargaining and coalition formation The underlying philosophy of the articles collected in this book is consistent with the opinion of a growing number of economists and psychologists that economic issues cannot be understood fully just by thinking about them Rather the interplay between theory and experimentation is critical for the development of economics as an observational science Smith 1989 Reports of laboratory experiments in decision making and economics date
