Building Services Journal, 2006 **Holistic Analysis and Management of Distributed Social Systems** Peter Simon Sapaty, 2018-09-22 This book describes the application of a high level technology to solve problems in distributed systems that have networked structures with millions to billions of nodes The main difference from other works is that the approach is based on holistically and simultaneously analysing these systems using a spatial pattern matching mode which produces solutions hundreds of times faster than usual The latest version of the technology is described together with implementation details and basic Spatial Grasp Language In addition the book highlights numerous solutions covering graph and network problems their use in large social industrial and business ecosystems social robotics and driverless transport and the possibility of extrapolating from known gestalt laws on distributed systems which could potentially be applied in civil and defence contexts The book is intended for system scientists business and industry managers economists application programmers security and defence personnel as well as university students *Bridging the Education Divide Using Social Technologies* Somprakash Bandyopadhyay, Arina Bardhan, Priyadarshini Dey, Sneha Bhattacharyya, 2021-02-06 This book explains the concept of education divide in rural India and identifies various factors that shape and sustain such a divide In doing so it also discusses a range of attempts undertaken to bridge the education divide Subsequently the book has attempted in providing a socio technical framework towards optimally deploying social technologies for addressing the issue of education divide of marginalized communities The proposed framework offers a transition from traditional content centric teacher centric and centralized education ecosystem to a connection centric learner centric and decentralized education ecosystem of the socio digital age It demonstrates how Internet enabled digital platforms based on the principles of sharism and mass collaboration using social technologies could help to solve one of the greatest problems facing the world mitigating the extant education divide by delivering quality education to underprivileged sections of society The book also presents empirical validation of the proposed framework to show how a community driven blended learning platform can mobilize the dormant knowledge capital of domain experts to teach underprivileged rural Indian children as well as help form communities of practice to enable lifelong learning for the rural adult population The book closes by pointing out the challenges involved in building an equitable education ecosystem using social technologies and ultimately the possibility of creating a fair and equitable society Given its scope the book offers a valuable resource for researchers policymakers and practitioners in the domain of education who want to transform education ecosystems by using technological and process related innovations to improve educational practices for underprivileged sections of society *Understanding China's Urbanization* Li Zhang, Richard LeGates, Min Zhao, 2016-03-25 China s urbanization is one of the great earth changing phenomena of recent times The way in which China continues to urbanize will have a critical impact on the world economy global climate change international relations and a host of other critical issues Understanding and responding to China s

urbanization is of paramount importance to everyone This book represents a unique exploration of the demographic spatial economic and social aspects of China s urban transformation Based on years of fieldwork and data analysis from different types of cities and towns in every region of China the authors present a detailed description of how China has urbanized since 1978 and an original theory about the way in which top down and bottom up policies have impacted urbanization They describe China s on going urbanization process as a double dual transformation from a planned economy to a more market oriented one and from a concern with the quantity to the quality of urbanization In doing so the authors provide the most comprehensive and up to date book on Chinese urbanization to date This scholarly study will appeal to academics and practitioners including professors and postgraduate students of urban studies planning geography Asian studies and other social science disciplines and professional fields concerned with cities and urban development Professionals involved in international development particularly in China and elsewhere in Asia will be particularly interested in the book

HVAC - Variable Refrigerant Flow (VRF) Systems A. Bhatia, 2014-12-06 VRF Variable refrigerant flow is an air condition system configuration where there is one outdoor condensing unit and multiple indoor units The term variable refrigerant flow VRF refers to the ability of the system to control the amount of refrigerant flowing to the multiple evaporators indoor units enabling the use of many evaporators of differing capacities and configurations connected to single condensing unit The arrangement provides an individualized comfort control and simultaneous heating and cooling in different zones Currently widely applied in large buildings especially in Japan and Europe these systems are just starting to be introduced in the U S The VRF technology system was developed and designed by Daikin Industries Japan who named and protected the term variable refrigerant volume VRV system so other manufacturers use the term VRF variable refrigerant flow In essence both are same With a higher efficiency and increased controllability the VRF system can help achieve a sustainable design Unfortunately the design of VRF systems is more complicated and requires additional work compared to designing a conventional direct expansion DX system This 3 hour quick book provides an overview of VRF system technology Emphasis is placed on the control principles terminology basic components advantages and design limitations This course is aimed at the personnel who have some limited background in the air conditioning field and is suitable for mechanical electrical controls and HVAC engineers architects building designers contractors estimators energy auditors and facility managers The course includes a multiple choice quiz consisting of fifteen 15 questions at the end Learning Objective At the conclusion of this course the reader will Understand the difference between multi split air conditioning system and VRF systems Understand the operating principle of direct expansion split and VRF system Understand the concept of thermal zone Understand how VRF with heat recovery are different from ordinary heat pump systems Understand the operation of thermostatic expansion valve TXV and electronic expansion valve EEV Understand the influence of building characteristics and load profile on selection of VRF system Learn the advantages and application of VRF systems Understand the design limitations and
