Being Alive Essays On Movement Knowledge And Description Tim Ingold:

Being Alive Tim Ingold, 2011-04-19 Anthropology is a disciplined inquiry into the conditions and potentials of human life. Generations of theorists however have expunged life from their accounts treating it as the mere output of patterns, codes, structures or systems variously defined as genetic or cultural, natural or social. Building on his classic work *The Perception of the Environment*, Tim Ingold sets out to restore life to where it should belong at the heart of anthropological concern. *Being Alive* ranges over such themes as the vitality of materials, what it means to make things, the perception and formation of the ground, the mingling of earth and sky in the weather world, the experiences of light, sound and feeling, the role of storytelling in the integration of knowledge and the potential of drawing to unite observation and description. Our humanity, Ingold argues, does not come ready made but is continually fashioned in our movements along ways of life. Starting from the idea of life as a process of wayfaring, Ingold presents a radically new understanding of movement, knowledge and description as dimensions not just of being in the world but of being alive to what is going on there. **Being Alive** Tim Ingold, 2021

skill Neither innate nor acquired skills are grown incorporated into the human organism through practice and training in an environment They are thus as much biological as cultural To account for the generation of skills we have therefore to understand the dynamics of development And this in turn calls for an ecological approach that situates practitioners in the context of an active engagement with the constituents of their surroundings The twenty three essays comprising this book focus in turn on the procurement of livelihood on what it means to dwell and on the nature of skill weaving together approaches from social anthropology ecological psychology developmental biology and phenomenology in a way that has never been attempted before The book is set to revolutionise the way we think about what is biological and cultural in humans about evolution and history and indeed about what it means for human beings at once organisms and persons to inhabit an environment The Perception of the Environment will be essential reading not only for anthropologists but also for biologists psychologists archaeologists geographers and philosophers This edition includes a new Preface by the author
