**Cyber Security Application Security** Mark Hayward, 2025-05-14. Cyber Security Application Security involves a wide range of practices throughout the software development life cycle including secure coding, threat modeling and penetration testing. The objective is to safeguard sensitive data and ensure that applications remain functional and secure against unauthorized access or attacks. Security must be considered from the inception of the application rather than being an afterthought. Developers, security professionals and organizations must collaborate to build security into applications enabling them to withstand potential exploitation.
