Yang,2006-06-28 Actuating materials hold a promise for fast spreading applications in smart structures and active control systems and have attracted extensive attention from scientists of both mechanics and materials sciences communities High performance and stability of actuating materials and structures play a decisive role in their successive applications as sensors and actuators in structural control and robotics The advances of actuating materials however recently encountered a severe reliability issue For a better understanding toward this issue scientific efforts are of paramount significance to gain a deep insight into the intricate deformation and failure behaviors of actuating materials To examine the state of the art in this subject the general assembly of IUTAM approved in August 2002 at Cambridge University UK a proposal to hold an IUTAM symposium to summarize the relevant research findings The main themes of the symposium are i the constitutive relations of actuating materials that couple mechanical electrical thermal and magnetic properties as well as incorporate phase transformation and domain switch ii the physical mechanisms of deformation damage and fatigue crack growth of actuating materials iii the development of failure resilient approaches that base on the macro meso and micro mechanics analyses iv the investigation of microstructural evolution stability of phase transformation and size effects of ferroelectric ceramics shape memory alloys actuating polymers and bio actuating materials The above problems represent an exciting challenge and form a research thrust of both materials science and solid mechanics The IUTAM Symposium GA

macroscopic practical applications It is precisely this gap which the book sets out to fill Dividing the topic into logical strands covering pollution waste and manufacturing the book examines the potential for biotechnological interventions and current industrial practice with the underpinning microbial techniques and methods described in context against this background Each chapter is supported by located case studies from a range of industries and countries to provide readers with an overview of the range of applications for biotechnology Essential reading for undergraduates and Masters students taking modules in Biotechnology or Pollution Control as part of Environmental Science Environmental Management or Environmental Biology programmes It is also suitable for professionals involved with water waste management and pollution control

The Chemical Engineer, 2007 **Environmental Biotechnology**, 2017 Microbial Ecology of Biofilms

Bruce E. Rittmann, 1999 Biofilms are ubiquitous yet until recently scientists and engineers involved in biofilm research or application had a severely limited insight into the structure and functioning of biofilms on a microbial level However the past decade has seen an explosion of new techniques to elucidate the structure and functions of biofilms e.g. molecular probes microsensors scanning electron microscopy and a new generation of mathematical models The 35 contributions selected for these proceedings after peer review reflect these developments with papers grouped into the following themes nutrient removal systems anaerobic systems biofilm physical structure and aerobic water treatment multidimensional modelling detoxification of hazardous chemicals and transport processes in and to the biofilm The proceedings provide a unique panorama of the latest scientific tools the emerging new concepts and the widespread applications that are making microbial ecology of biofilms such an exciting field These genuinely state of the art papers lay foundations for great progress in the next century
